National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

The Charles Bacon House, at 819 Kentucky Street in Louisiana, Missouri, is sited on a steep hill overlooking the town and the Mississippi River. Built circa 1850, the two and one-half story, five-bay, brick house set on a stone foundation, is articulated in a vernacular Greek Revival style. The house retains its most significant features of plan and design; the enclosure of a one-story rear porch and addition of a large second story rear dormer have not diminished the overall integrity of the building.

Measuring approximately 37 1/2 feet wide (east-west) by 31 feet deep (north-south), the house features a two-story wood porch extending approximately eight feet from the front (south) facade wall, and a one-story wood porch (now enclosed) extending approximately seven feet three inches from the rear (north) wall. A 1980s wood-framed dormer addition rises from the rear porch roof. The side-gabled roof (covered with asphalt shingles) is integrated with the front porch roof; twin chimneys are connected by a parapet at the gable ends.

Windows display slender wood lintels and wood sills and employ double-hung sash with six-over-six lights. On the front (south) facade, first and second story primary-entrance doors are located in the center bays. The first story, center door is a six-panel "cross-and bible" design, enframed by fluted pilasters; the tri-part french door flanking on the west appears to be a replacement although the wall opening is original, headed with a heavy wood lintel tied into the stone foundation wall. The west stone foundation wall continues exposed on the interior, suggesting that this room (behind the french door) originally was a service or storage space, possibly for a carriage. The second story doorway on the primary facade, is headed with a wood lintel and glazed transom. The east (side) elevation exhibits regular fenestration; an original doorway, headed with a transom light is located on the first story. The fenestration on the west (side) elevation is irregular; two doors (perhaps originally windows) flanking a chimney open into the front room. The second story rear (north) elevation is pierced by two doors, each opening into a major room.

The interior plan features a center hall flanked on either side by two rooms of inconsistent size. Although both first and second story

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

The Charles Bacon House is eligible for listing in the National Register under Criterion C as a rare example of mid-19th century domestic architecture in Louisiana, Missouri. It is distinguished from other local Greek Revival houses of the period by its hillside siting, and its design, featuring a first-story raised basement with internal stairs, a two-story gallery, and paired, parapeted chimneys.

Background History:

Louisiana, Missouri (population 4261) is located on the Mississippi River approximately 75 miles north of St. Louis. Laid out in 1818, it is the largest and oldest city in Pike County. As the name of the town suggests, Louisiana was settled by southern families, principally from the upland southern states for whom the major east-west streets were named: Virginia, Kentucky, Tennessee, and the Carolinas. (1) The city and county lie within an eight-county area of the state known as Little Dixie, a regional identity based on its cultural ties to the Upland South.(2) At the time the Charles Bacon house was built, circa 1850, Louisiana was emerging from a frontier state into a prosperous river town, a shipping point for a large volume of agricultural products, (chiefly wheat, livestock and tobacco) raised in the rich countryside around Pike County.(3)

Although little is known about Charles Bacon, the scant information suggests he enjoyed some measure of wealth and community standing. He is first listed in Missouri in the 1850 census, a 34 year old native of New York state, engaged in farming, living with his Virginia-born wife, Sarah, 25, and four children, ages six to one, all born in Missouri. Deed records indicate that Bacon was in Pike County by 1843 when he began purchasing extensive rural property. During the 1840s and 1850s he was active in local Democratic politics. Among other things, he served as a Pike County delegate to a Democratic convention in 1846, and was one of the endorsers of a resolution supporting Henry Clay's

hallways now terminate in bathrooms, there is physical evidence that the second story hall once continued to a rear (north) wall opening. The first story is treated as a raised basement with the west and north walls below grade. Original stairways with walnut handrails and newel posts lead to the second story and to the attic story rooms. The first story floor is concrete, but original random-width pine floors are intact on both the second and attic stories. Interior window and door surrounds are very simple, probably original; most doors are two-panel. One original fireplace mantel of simple design survives on the west wall of the second story. The house recently has been painted white, covering earlier layers of red and white paint.

compromise bill in 1850. A church record of 1853 noted that Bacon was one of the founders of the First Baptist Church in Louisiana.(4) By 1858, Bacon had acquired considerable property in town judging from a real estate tax book which shows him owning lots (several improved) in nine different city blocks, including all of Block 76 in which the house stands; he owned no slaves at this time.

Due to a courthouse fire which destroyed some of the county deed books, there is no record documenting when Bacon purchased Block 76. The construction date of the house traditionally has been cited as circa 1850 on the authority of a descendant of a later owner.(5) Fortunately, however, two deeds confirm Bacon's ownership of the property: one of 1858 in which Bacon transferred all of Block 76 to James O. Broadhead; (6) and another which records Broadhead's sale of the same block in 1864 and states, "upon which property is situated a two story brick dwelling house originally built by Charles Bacon." (7) Apparently Broadhead never occupied the house; a county history notes that he moved to St. Louis to practice law in 1859.(8) Charles Bacon's life is a virtual mystery after he deeded the house to Broadhead. Although it is documented that Bacon attended a public meeting in Louisiana in late December, 1860,(9) neither he nor his family are listed in the index to the 1860 Missouri Federal census.

During the Civil War years the house served as the local Union headquarters and as a holdover for arrested Southern sympathizers. The building's strategic location high on a bluff overlooking the town and river made it an ideal look-out. Except for one skirmish at Ashley, Pike County escaped Civil War incidences.(10) In 1865, the house passed to German-born George Marzolf, who settled in Pike County in 1838 and engaged in farming. When he moved to Louisiana about 1860 he began manufacturing tobacco under the firm name of Marzolf & Seibert. The Bacon house remained in the Marzolf family until the 1920s.

Architecture: The Bacon house is one of a small number of large, Federal/Greek Revival antebellum houses which survive from the city's early period of growth and prosperity. Post-Civil War Late Victorian styles, particularly the Italianate, are far better represented quantitatively in Louisiana's residential context. Typically, mid-19th century domestic architecture in Louisiana expresses a conservative, vernacular classical tradition which combines Federal and Greek Revival elements, and occasionally Italianate details. The most common detail indicating the arrival of Greek Revival is the use of flat (or slightly

Bacon, Charles, House

pedimented) lintels over openings instead of brick jack arches associated with the Federal style. The introduction of sidelights in primary entrances and simple classical projecting porches also signals Greek Revival, although both are less frequently found in Louisiana. The majority of these antebellum houses are two-story, three-bay, side-hall buildings; a few are either two-story I-house types, or two-story, double-pile, central passage houses.

Several features of the Bacon house distinguish it from other Louisiana homes of the period. The most immediately apparent is its siting. Built into a hillside which occupies a full city block of the original town, the house commands an extended view of Louisiana and the Mississippi River. Over the years, the house site became a local landmark, referred to as Marzolf's Hill after the postbellum 19th century owner, and in the 20th century, known as Star Hill for the Missouri Edison star of lights which illuminated the top of the hill at Christmas.(11)

The plan of the house also sets it apart from other vernacular Greek Revival houses which exhibit similar forms, materials and detailing. One of only a very few to boast a double-pile central passage plan rather than an I-house plan, the Bacon house is further distinguished by the design of the first story which is treated as a raised basement (partially below grade) but connected by internal stairs to the second floor. The original oversized opening flanking the first story center-bay doorway is a unique feature, possibly designed as an entry for a carriage. The two-story, full-facade porch or gallery and the high, paired chimneys connected by a parapet are also rare in the area and impart a distinctive profile to the house. The ensemble of site, plan, and design elements makes the Bacon house one of Louisiana's most significant houses of the mid-19th century period.
