**6601 Alamo Avenue. 1919; Architect: Joseph Leopold; Builder: Joseph Leopold.; Developer: Joseph Leopold (photos #53 & #54)**

This two-story four-apartment building is a classic Craftsman building has a cross-gabled roof that is hipped and covered with shingles. The three-over-one panel windows are similar to those on San Bonita Avenue from a decade earlier. Note the simple yet elegant lines under and over windows to accentuate them with concrete sills and crowns. Just below the roofline is a row of squared ornaments that add to the beauty. The decorative crown over, and pillar-like accents on the sides, of the doorway have a Colonial influence. The hallway windows are of the ribbon style with irregular patterns set in a bay with ornamental brackets underneath. The matching four-bay garage also has all original doors and windows and sits at the west side of the building on the alley.

**6610 Alamo Avenue. 1919; moved in 1930. Architect: Dawn Architects; Builder: John Porta; Developer: Harmac Investment Co. (photo #56)**

This two-story duplex was built in the American Craftsman style. It originally sat on Clayton Road and is the only building in the subdivision that has been moved. It was moved to make room for commercial development. The parapet has a castellation in the Gothic Revival mode. Below that at the level of the flat roof is a belt course. The original windows have eight-to-eight panes on the second story, six-to-six on the first story and are original. There is a glass transom over the original door. Storm windows protect all windows and doors. There are quoins above the windows as accents. The small roof over the porch is layered with shingles. Brackets hold up the porch. Concrete sills accentuate the bottoms of all windows.

**6612 Alamo Avenue. 1930; Architect: Dawn Architects; Builder: John Porta;  
Developer: Harmac Investment Co. (photos #57 & 58)**

This is one of seven French Eclectic buildings constructed on Alamo. The major distinguishing feature of these buildings is an entrance and common hall made in the form of a turret. The second floor window in the turret has a half moon transom. Note the three belt courses around the turret. The roof is a side gabled roof of moderate pitch covered in shingles as is the turret. The apartment windows appear to be original as do the doors. Note the asymmetry of the lower right most apartment window of three separate frames versus the double frames for the others. The upper turret window also is accented with a sill and concrete block. The original garage for four cars still exists in back with its flat roof although no doors now exist.

**6615 Alamo Avenue. 1930; Architect: Joseph Leopold; Builder: Joseph Leopold; Developer: Joseph Leopold (photos #59 & 60)**

This is the second of seven French Eclectic buildings constructed on Alamo. The roof has a slight pitch with light colored shingles. The brick is a lighter, variegated coloring that distinguishes it from its brothers. The doors and windows are similar to those in the 6612 building but note how the upper story right-hand apartment stands out in relief with its own roofing. As with 6612 Alamo, the lower right-hand apartment window has three ribbons while the others are double frames. Note the double brick belt courses about four feet up from the ground and square accent concrete quoins above the doorway and the turret window. Unusual two-by-six opaque glass brick windows line the four smaller turret windows. The front entrance is bracketed by concrete a archway. The four-car garage is original brickwork but the doors and posts have been replaced.

**6616 Alamo Avenue. 1940; Architect: H A Barnett; Builder: H A Barnett;  
Developer: H A Barnett (photos #61 & 62)**

This is the third of seven French Eclectic buildings constructed on Alamo. The roof is a dual-hipped type with light colored shingles. The turret entrance has a massive three-part upper window and door with a small inset window that are both original. The upper apartment windows are double hung originals. The lower windows both double windows with an half-moon window over top each that is also original. There are concrete accent blocks above and below the large turret window and a massive concrete block set on the stonework around the doorway that makes this an unusual building for the subdivision as virtually all buildings used only bricks in construction. The half-basement is also unusual for showing off the cut stone to produce a more rustic look. The four-car garage also uses a square hipped roof with shingles and an opaque glass window with modernized doors.

**6619/21 Alamo Avenue. 1938; Architect: F. G. Avis; Builder: H A Barnett;  
Developer: H A Barnett (photos #63 & 64)**

This front-gabled two story, four-apartment building with a low pitch roof covered with shingles is of the American Craftsman style. The gable has a white wood trim at the wall junction that is unusual. Four doors at the entrance are original with a peek-hole window in each. False pillars bracket the doors, which is set off by a concrete arch with simple relief sculpturing. Note the concrete blocks at the bottom and quoins at corners of the entrance add accent. The living room windows are also originals and set at the corners of the building. They are not symmetrical. The upper ones have two windows each double hung with three-by-two panels. The lower left window has two two-by-two panels. The final window in the lower right corner is a single window with four-by-two panels in the double-hung sashes. There is a four-bay garage in the rear with newly installed doors.

This two-story duplex is of the American Craftsman type using a light-colored brick. The roof has shingles over a cross-gable that has a slight eaves with brackets at corners. There are four ribbon style windows that are originals on the second floor. These are of the six-over-one double sash type with a concrete sill. The first floor windows are of the same type. Front doors to each apartment are originals with a small peek-hole window in each. Cut stonework walls and columns support the full front porch. The porch roof has a slight pitch and is covered with shingles. Concrete blocks give accent to the porch and stairs leading up to it.

**6625 Alamo Avenue. 1936; Architect: F G Avis; Builder: H A Barnett; Developer: H A Barnett (photos #68 & 69)**

The fifth of the seven French Eclectic buildings is a two-story four-apartment construction. This building is the only building on the block constructed of multi-colored brick. The gabled roof is side hipped with plain-patterned slate materials but with a same-colored belt course around the second story. The turret has an ornately designed stained glass window. The upper story windows are of a three-by-three pane design for both lower and upper parts. The lower windows have a half-moon transom with inner arches to separate the various panes of glass. All doors and windows are original. The bottom half of the turret is constructed of cut limestone. There is a belt course of cut concrete blocks around the turret above the door.

Another Craftsman design is this front-gabled two-story, four-apartment building. This essentially the same building plan as 6625 Alamo but uses different accents to create the allusion of difference. For example, there is a half-moon sculptured relief in the attic area. The roofing for the four entrances uses a curved slope roof covered in slate. The entrance doors are accented by fake pillars and four glass bricks function as windows on each side of the middle doors. The original garage exists in the rear without doors. It has a flat roof and walls of brick.

**6628 Alamo Avenue. 1928; Architect: F G Avis; Builder: H A Barnett; Developer: H A Barnett (photos #72)**

This seventh French Eclectic style with turret is more austere than the others due partly to the choice of dark brick and intricate bricklaying of inset brick in dark colors. The massive dark stained glass window in the turret also adds to the darkness. Note the brick belt course about sill level on the second story. A light concrete belt course wraps around below the first story windows. Above each window is a brick line and quoins. Window gables give the appearance of recessed bricklayers. The front entrance is bracketed by a marvelous sculptured pillar-like effect with weighty looking arch. The front door has an original 5-by-3 set of glazed panels inset into the door frame.

**6631 Alamo Avenue. 1939; Architect: F G Avis; Builder: H A Barnett; Developer: H A Barnett (photos #73 & 74)**

Yet another French Eclectic design was used for this building. The brick is multi-colored for both the building and the garage. The roof is an unusual inset gable covered in shingles. This is essentially the same design as the other French Eclectic buildings to its east like 6615 Alamo. The only real difference is the squashed turret. The brickwork around the massive stained glass window is of the same color to make the window stand out. Cut concrete bars and pillars help accentuate the window (which really doesn't need help!). Opaque glass blocks bracket the front entrance to allow in light. All doors and windows are intricate and original. Original period awnings are found over three of the windows. A belt course of light brick surrounds the building at knee height. The four-bay sp garage lacks doors but retains its original brickwork and flat roof.

**6633 Alamo Avenue. 1926; Architect: Appel; Builder: Appel; Developer: Theresa Thier (photo #76)**

This American Craftsman design for a four-apartment building is similar to those of 6625 and 6627/29 Alamo. The difference is the shared entrance on this one. The roof is of the low-pitched gabled variety with shingles. Note the large eaves overhang and five ornamental brackets under the front eaves. An ornamental coat of arms is sculptured near the roof peak. The brickwork for the common hallway and entrance are set off in relief. A small belt course accents the top of this relief with four small sculptured pieces as accents. The small porch over the entrance is a smaller version of the roof. The entrance has an original door with three ribbon pieces of glass. Four panes of glass are found to each side of the door. Windows are the original 1920s design commonly seen in the subdivision. The upper sash has three panes with one pane for the lower sash. Each window frame is accented with a brick sill.

Builder: Sam Brown; Developer: Albert Realty & Construction Co. (photos #77 &  
78)**

This American Craftsman styled 10-flat apartment building is one of the finest examples of the style in the area. There is huge attention to accents and details. Notice the large number of quoins incorporated into the front. All corners have quoins and three quoins accent each of the window-porches. Two quoins are found at the top of each of the common hallway windows. Two large sculptured reliefs are incorporated into the top of the building near the flat roof with three smaller bas reliefs placed in-between. Apartment doors use five-by-two panels in the original porch doors. These are accented by ribbon windows on each side of five panels to let in light. A belt course wraps around the front of the building above the windows and doors of the second floor. Concrete sills are placed below the hallway windows. The doors have smart sculptured frames with a hood-mold in quasi-star shape. Entrance doors resemble those of the apartments and are original. This apartment building gives off a nice touch of air and light and habitability. There is a modern carport built for only four cars in the back of the building.

**6639 Alamo Avenue/ 914-918 Concordia Lane. 1929; Architect: Ben Shapiro;  
Builder: Sam Brown; Developer: Henry Wade (photos #79 & 80)**

This American Craftsman styled 15-flat apartment building is one of the finest examples of the style in the area. There is huge attention to accents and details. Notice the large number of quoins incorporated into the front. All corners have intricate brick patterns of diamonds. Two quoins accent each of the windows. Two quoins are found at the top of each of the common hallway windows. Two large sculptured reliefs are incorporated into the top of the building near the flat roof with three smaller bas reliefs on the sides. All of the windows are set as double windows of two sashes of the familiar three-to-one pattern found through the 1920s in this area. Concrete blocks are used for sills and a special brick pattern for window crowns. The entrance ways have a flat arch set on top of stones with a segmenal arch over the main entrances which have two panels of glass set in the original door frames. Note that both the Alamo and Concordia sides are built with exactly the same intricate pattern.

Apartment doors use five-by-two panels in the original porch doors. These are accented by ribbon windows on each side of five panels to let in light. A belt course wraps around the front of the building above the windows and doors of the second floor. Concrete sills are placed below the hallway windows. The doors have smart sculptured frames with a hood-mold in quasi-star shape. Entrance doors resemble those of the apartments and are original. This apartment building gives off a nice touch of air and light and habitability. There is a modern carport built for only four cars in the back of the building.

**6501 Clayton Road. 1921; Architect: Hy P. Nus; Builder: Kellerman  
Construction; Developer: Christian Brothers (photos #81 - 85)**

The main high school building is a fantastic three-story example of Gothic Revivalist architecture facing south on Clayton Road. When Christian Brothers put the building up for sale several years ago fortunately Concordia Seminary bought it and plans to preserve it rather than tear it down as developers had wanted to do to get at the nearly nine acres to build modern retail or residential units. All windows and doors have been replaced with energy efficient ones but the main structure is filled with Gothic overtones. Note the two castellated turret-battlements and parapet. Eight centered gables exist with coats of arms crafted on six. Several belt course of varying thicknesses envelop the structure. The flattened Gothic Revival archway enhances the main entrance. There are irregular quoins set around windows as accents. White quoins in irregular patterns give the turrets an interesting period effect. Note the princess windows on the turrets. Six column supports between windows have accented top pieces. The main building façade is recessed between two ends with bay windows.

The brother's dorm faces east on Seminary Place (aka University Lane) and is attached to the main building by a first and second floor walkway. It was built in 1941. All windows and doors are the originals. It has four floors with the top floor built under the cross-gabled roof. This building is less ornate with simple concrete sills under the double hung sash windows.

The gymnasium sits at the western edge of the main building and is built in a more modern style. This was built in 1946. There are also several buildings in the back, which are non-contributing to this application. They are a physical education building, spectator stands and support building for food service during athletic events. These buildings were added in the 1980s and 1990s.

**6601 Clayton Road. 1924; Architect: George C Smith; Builder: same; Developer: same (photo #86)**

The American Craftsman design is a two-story, four-apartment building. Ribbon windows in triples abound. These are the original four-over-one paneled sash type. Sills use protruding bricks. Above the casements another set protruding bricks with quoins accent the windows. The original doorway has three panels of glass. An archway highlights the door with a semi-circular transom and side windows. The flat roof is offset by a false eaves tiled with shingles. False beams and handsome brackets are set under the eaves. Note the white tiled rectangular feature above the hallway window. Spanish tiles line the wall-roof junction. The common hallway and entrance are recessed from the bricklaying used for the apartments.

**6607 Clayton Road. 1929; Architect: Norma Barrow; Builder: F. J. Kolb;  
Developer: William M. Lawler (Photos #87 & 88)**

This two-story building with four apartments is in the American Craftsman style. Note the Gothic overtones: parapet at front of the flat roof with a shield of arms and the hallway window with 17<sup>th</sup> century sash pattern with inlaid pieces of opaque glass. The curved overhang over the doorway adds to the Old World appearance. Windows use simple casements hung on top of concrete sills and are original. The main door uses panels of three rows by five columns with side panels of five panes. Quoins are used at the building corners for accents. The hallway bricklaying makes it protrude to set off the common area from private apartments. The brickwork is multi-colored. In the rear at the alley are the original three walls of a four-car garage. More secure doors have been added.

**6609 Clayton Road. 1929; Architect: Stanley Knarth; Builder: S. L. Enosh;  
Developer: Leon & Carreu B. Rover (Photo #89)**

This is one of the most ornate of the Spanish Eclectic style buildings in the subdivision. It is a two-story, four-flat apartment building. It has a typical Mission style parapet over the hallway. The upper story of the hallway has four-by-five panel glass bricks set as a source of light. Apartment windows always have a large picture window with two sash windows on either side. A concrete sill sitting on a rectangular area of off-colored bricks accentuate these windows. An overhang runs nearly the entire length of the building at the bottom of the second floor. Corners use raised bricks to mimic quoins. Although the roof is flat, the façade appears to be a flat-topped and hipped member of the gabled family. Traditional Spanish red tiles lay over this façade.

**6611, 17, 19 Clayton Road. 1924; Architect: George A. Ruel; Builder: George A. Ruel; Developer: T. Hanlon (Photo #90)**

This commercial building of 20 offices is of the American Craftsman style. It is a two-story building with a flat roof. There are numerous accent marks on the second floor façade including a row of white square sculptures with columns of black squared fixtures. All of the upper windows are original. The bottom floor has large windows but it is not clear when they were added. A variety of small businessmen, doctors, dentists, accountants, et cetera have used the upper story offices over the years. Presently a gourmet coffee shop and a ballet teaching facility occupy the first floor space. All five doors appear to be original. A canopy covers the entire length of the building between the second and first floor windows.

**6621 Clayton Road. 1920; Architect: Unknown; Builder: Unknown; Developer: Unknown (Photos #91 & 92)**

This was the first building constructed in the Hi-Pointe Addition Subdivision (and before it was plated). It is an American Craftsman design with Tudor overtones. Notice the cross-gabled bay window in the hallway area. Below that, the doorway borrows from the Gothic archway with quoins and label mold. Behind this sits the original door and side windows protected by storm windows and door. The apartment windows are doubles with the typical three-to-one sashes seen throughout the neighborhood in the 1920s. Concrete sills and crowns with two quoins set on each side accentuate these windows. Gothic parapets line the roof. The four urns are original. The three-sided garage in the rear is original but is missing its doors.

**6633 Clayton Road. 1929; Architect: F. G. Avis; Builder: Unknown; Developer: Robert A. Armbruster (Photos #93 & 94)**

This English Tudor building has long been noted as an important landmark. It was built as a mortuary with additions added in 1939 and 1946 just before and after WW II. It has prominent cross-gables, massive fireplaces, multi-pane glazing and a semi-hexagonal bay window elaboration. The windows have stained glass protected by clear glass. The primary building materials of the walls is limestone with the roof of plain, but variably colored, slate. Note the arched drive through addition to the right (east). An eagle sculpture adorns the main entrance way.

**6701 Clayton Road. 1950; Architect: Unknown; Builder: Unknown; Developer: Unknown (Photos #95 & 96)**

This building has served a number of commercial purposes. It has been a sports store at one time. Presently it used primarily by the St. Louis Bread Co. who renovated the façade and a defunct micro-brewery. An insurance agent occupies a second-story office at the east end. The building is laid with a flat roof covered with commercial tars.

**6733 Clayton Road. 2004; Architect: Unknown; Builder: Unknown; Developer: Walgreens (Photo #98)**

This property once held both the first drive-in restaurant in the country, the Parkmoor, which had two distinctively interesting period buildings from the 1930s including a prime English Tudor example. The McGinley Family, LLP, which owned both properties recently allowed those buildings and a former grocery store turned Walgreens to be razed and turned into this modern Commercial building.

**901 Concordia Lane. 1925; Architect: Lawrence Rudhoff; Builder: John Herzog; Developer: John Herzog (Photos #103 & 104)**

This Craftsman Eclectic building is a two-story, four condominium although it once was originally four separate rental apartments. The crown of the building has an irregular shape with a false gable. Each of the unit windows consists of two double-sashes of the four-over-one panel type and these are original. The hallway window is also a single double-sash window of the four-over-one type. Each window as a crown of bricks set on edge and a sill of concrete slabs with a concrete slab post between windows. The doorway is original with nine-panel window inset in the door way and four-panel windows on each side. The building has a flat roof. A low-pitched overhang with brackets to aid in attaching to the building sits over the doorway. All units have modern kitchens and bathrooms. There is an original car port in the back with a flat room and cinder block backside.

**905 Concordia Lane. 1925; Architect: Unknown; Builder: Unknown; Developer: Unknown (Photo #105)**

This late American Craftsman styled building is a two-story, four unit building of apartments built at the end of World War II. Irregular brick patterns are used to accent windows. Sills are of bricks. Windows are of one large panel bracketed by two sash panels on each side. The roof is a pyramidal shingled type with low pitch. Opaque glass bricks over the door allow light into the hallway. All windows and the door appear to be original. The door has a set of glass panels down the middle.

**913/915 Concordia Lane. 1930; Architect: F. G. Avis; Builder: Oscar W. Earickson Jr.; Developer: Oscar W. Earickson Jr (Photos #107 & 108)**

This two-storied Spanish Eclectic duplex has a marvelous Spanish tiled façade of the side-gabled type. The gable is held up by brackets with a substantial eaves overhang. Two windows and all doors have a semi-circular arched design. Note the small accents of quoins at the sides of the window and door crowns. Four doors are French doors with five-by-two panels in each door. The porch, which extends the entire length of the second floor, is anchored by piers with anchored sides. False balconies are found on the second floor for the two door-windows. The garage is of the American Craftsman style of brick. Its door is a recent replacement. Note the irregular crown over the front of the garage.

**917 Concordia Lane. 1953; Architect: Richard A. Roberts; Builder: Richard A. Rober Jr.; Developer: W. F. Nahlik (Photos #109 & 110)**

This one-story four-efficiency apartment has American Craftsman elements although it is a poor fit with the two-story buildings that surround it. There is a cinder block garage of three sides with a flat roof in the rear of the building that is not visible from the street. The building would have been disallowed under the original restrictive covenants because they did not allow one-story buildings with flat roofs.

**919-921-923 Concordia Lane. 1925; Architect: Clara Mueller; Builder: Clara Mueller.; Developer: Clara Mueller (Photos #111 & 112)**

This two-story three-flat is of the Prairie Style. It has a low-pitched roof of plain patterned slate tiles on a pyramidal gabled roof. The same tiles and low-pitched roofing are spread over the first floor roofing of the middle apartment. There are four windows for the first-floor middle apartment with a three-by-three panel design throughout. Each is protected by modern storm windows. The three original entrance doors have the same three-by-three window panel design. Upper windows are much plainer with simple two-sash panels. There is a shared driveway with 925-927 Concordia Lane and a shared garage for four cars with three sides of brick and open to the front.

**925/925A/927 Concordia Lane. 1924; Architect: Clare Mueller; Builder: Clare Mueller; Developer: Clare Mueller (Photo #113 & 114)**

This is essentially the same building plan as the three-flat to its north at 919-921-923 designed by the same architect. The style is American Craftsman. The pyramidal roof of low pitch is tiled in shingles. The middle entrance apartment has sets of three double-sash windows that are original. The doorway has a transom and is framed by two windows on each side. The door has opaque glass with an intricate design that is original. Note the stone work below first floor window level. Each of the side apartment entrances has a two-by-two panel window over a one-piece sash. Each door has a peephole window in the form of a diamond that is original. There is a shared driveway and garage already described.

**929 Concordia Lane. 1929; Architect: Ben Shapiro; Builder: Sam Brown;  
Developer: S. Honigberg (Photo #115)**

This two-story duplex is one of the most elegant of the Spanish Eclectic designs in the district. Red Spanish tiles are laid on dual-pitched, hipped roof of cross-gable. There is a massive fireplace in front appointed with quoins and other accent marks. The upper story windows rest on concrete slabs and the original panels of glass are of the three-by-three for each sash. The upper door to the porch has a quoin at the top of the arch. The lower level has two French doors with panels of two-by-six panels on each door. There are three quoins as accents at the top of the brick-molded arch over each door. The main entrance has a massive wood door that must be original also. There is an arch over the porch as one climbs the steeps with urns set to each side. The brick is an elegant mixture of lighter colors through out.

**933 Concordia Lane. 1924; Architect: Unknown; Builder: Unknown; Developer: John H. Rodgers (Photo #116 & 117)**

This duplex is a two-story American Craftsman design with Spanish overtones. The flat roof has a false cross-gable with red Spanish tiles. The two living room windows each have a main window with two narrower side windows of double sash where the middle panes have a four-by-three paneled upper sash to one large panel for the lower sash. The side windows have a two-by-three paneled upper sash. The upper living room window is accented by wood trim painted white. A sort of brick garland ornaments the area under the sill. A porch with a gabled roof over the two front doors is also laid with red Spanish tiles and supported by two large brackets.. The two doors are original with a three-by-three pattern of glass panels. The two small windows above the porch have a three-by-three-over-one panel design. Quoin accents the space between them set between a linear set of bricks set on end that functions as a subtle crown. A two-car garage sits at the back of the duplex bricked on three sides and supporting a front-gabled roof with simple shingles on the room and over the front .

**905 St. Rita. 1929; Architect: Frank L. Dittmeier; Builder: Frank L. Dittmeier; Developer: Fred Slobright (Photo #99)**

This square, two-story, four-flat apartment building has a flat roof with a hipped façade of Spanish tiles and it has small eaves. It is typical American Craftsman design with triple windows of double sash type of the four-over-four panel style - which is original. All windows are accented by a crown of bricks in a pattern different from the rest of the walls and four quoins above and below the windows. The hallway window has two quoins above it. All windows sit on a concrete sill. The door is inset with two quoins above. Ribbon windows sit on either side of the doors. All doors and windows are originals.

**6501 San Bonita. 1927; Architect: not known; Builder: not known; Developer: not known. (photos #1 and 2)**

This three-story, three-flat is a Colonial Revival building of the Adams type owned by Concordia Seminary since the early 1930s sits at the main entrance to the campus. It shares common building characteristics with 6505 San Bonita Avenue and other 4-flats to its west that can be clearly dated to before 1930: (1) a now-bricked-in coal delivery chute; (2) stone foundation of the 1920s; (3) original backside iron stairways; and (4) a slot for ice delivery. These are characteristics of all buildings in the 6500-6600 block of San Bonita Avenue for which we have documented 1921-1929 building permits. Note the belt course near the top of the front façade; the accentuated front door with decorative crown; and broken pediments over, and at the sides of, windows. In the rear of the building is four-car garage space, which appears to have been re-tuckpointed. The metal pillar suggest this is an original building as many of the other more clearly dated 1920s-built garages along San Bonita also share this feature.

**6505 San Bonita. 1927; Architect: Ed Gieseler; Builder: Jacob Althaus; Developer: Jacob Althaus. (photos #3 and 4)**

This six-flat apartment building has been owned by Concordia Seminary since at least the early 1930s and used to house seminarians and junior faculty. The style has classic Adams Colonial overtones such as the belt course at the top of the building. Other decorative details include the recessed entrance and hallway, and partial balustrade at roof-level. Note also the Quoins and ribbon decorations above the third-floor windows. The entrance doorway is bracketed with ribbon-glass windows. There is a five-bay brick garage in the rear that is original except for the new security doors.

**6509/11 San Bonita. 1930; Architect: not known; Builder: not known; Developer: not known. (photo #5).**

This duplex has all of the classic lines of at least twelve other Spanish Revival duplexes built in the original HiPointe Historic District as well as the HiPointe Addition. Note the l-shaped footprint. The original hipped roof of Spanish tile is still intact after at least 75 years. The actual roofing is flat but this Spanish Revivalist gem has uniquely eclectic features like the false beams and a pronounced overhang to differentiate itself from its sister designs. The footprint of the ground plan is exactly the same as those like 6633 and 6637 San Bonita Avenue built in 1924. This is the only duplex on the block without a driveway and garage in back, probably because the lot size was irregularly narrow.

**6515 San Bonita Avenue, 1927; Architect: records missing; Builder: records missing; Developer: records missing. (photo #6)**

This three-story, six-flat building is of the Craftsman style. It has a false-hipped roofing façade in front reminiscent of the Prairie style, although the actual roof is flat. The front has interesting accents: quoins over the windows and around the entrance; and a slightly recessed area for the entrance and hallway which compliments the Adams Colonial six-flat two doors east and the adjoining four six-flat buildings to its west. Concordia Seminary did not construct this building but owned in from about 1930 to 2000 to house seminarians. In 1998 they sold it to a developer who re-tuckpointed it and totally renovated the inside, while adding modern appliances, furnaces, central air conditioning, etc. before selling as condominium units.

**6535/35A San Bonita Avenue, 1927; Architect: E A Craft; Builder: E A Craft; Developer: R Waks and B. Rosenthal. (photos #11 & 12)**

This L-shaped duplex is unusual for the District for not being of the Spanish style. It is the only such local building of an eclectic Prairie-Craftsman style. Notice the low-pitched gable roof with shingles. The eaves have attractive ornamental brackets. The windows have the original blank lower panes with patterned upper panes. Doors also the original with inset glazed panes. This structure was hit by lightening around 2002 and has had replacement shingles and porch fencing where the tree fell. Note also the decorative balustrade and quoins around the windows and the lower belt course below the first floor windows. The rear garage has original brickwork but the low-pitch gabled roof has had new shingles and the garage doors are recent replacements.

This L-shaped duplex employs an eclectic style, mixing American Craftsman with Gothic overtones. The L-shaped roof is cross-gabled with a moderate pitch and uses the original plain slate patterned roofing. Likewise, the original ribbon windows with inset patterns are protected by an exterior storm window. Recently added storm doors protect the original doors, which have glazed windows. Notice the quoins on the porch pier and attractive urns. Both ends of the gabled roof have Gothic castellations with a six-pointed star as relief sculpture. The present owners have re-tuckpointed the building and totally renovated the inside, while adding modern appliances, furnaces, central air conditioning, etc. A low-pitched gabled roof with the same plain-patterned slate roofing covers the original two-car garage in the rear of the house.

This L-shaped duplex employs an eclectic style, mixing American Craftsman with Gothic overtones. The L-shaped roof is cross-gabled with a moderate pitch and uses the original fish-scale slate patterned roofing. An attic room has a window accented by quoins. The entrance is bracketed with decorative quoins and arches around windows and the door. The original glazed doorway is protected by a recently installed storm door. The front rooms extend beyond the traditional L-shaped pattern with an usual (for this block) wood-and-brick bay window of demi-hexagonal design. The original windows have upper panes that are patterned. A low-pitched gabled roof with the same plain-patterned slate roofing covers the original two-car garage in the rear of the house with one of the original doorways walled in.

This eight-apartment building was constructed in the American Craftsman style at the corner of St. Rita. There are embellishments of artistic square quoins and belt coursing under windows. A hint of a roof top balustrade adds a subtle aesthetic. The entrances have glazed windows bracketing the original doors.

This L-shaped duplex is another example of an eclectic American Craftsman design. The moderately pitched, cross-gabled roof employs plain-patterned slate roof. There is a small window of multi-colored Tiffany glass at the main entrance. All windows are originals with upper panes with ribbon patterns. Quoins offset the windows. There is a belt course above the second-floor windows and another below the first-floor windows. A six-pointed star sculpture is attached to the balustrade. The roof has an eave that is wide and overhangs without boxing. There is a transom above the main entrance. Several subtle variegated brick patterns are set into the standard bricklaying pattern. The two-car garage in the rear has a moderately pitched gable roof that is shingled. New doors have been added to the original garage.

**6607 San Bonita Avenue. 1924; Architect: Schuermann & Neumann; Builder: Schuermann & Neumann; Developer: Schuermann & Neumann (photos #20 & 21)**

This L-shaped duplex is another example of an eclectic American Craftsman design. The variably pitched, cross-gabled roof employs plain-patterned slate roof. The stairwell window to the side of the main entrance uses quoins and concrete blocks to frame the window a semi-circular arch at the top. All windows are originals protected by storm windows. Quoins and concrete block frames also offset the other windows and the entrance itself. The door and transom are original equipment. Urns sit on the front step walls at the height of the lower belt course. Ivy hides the partial belt course above the second-story windows. The two-car garage in the rear has a moderately pitched gable roof that is shingled. Replacement doors have been added to the original garage.

**6611 San Bonita Avenue. 1924; Architect: Schuermann & Neumann; Builder: Schuermann & Neumann; Developer: Schuermann & Neumann (photos #22 & 23)**

Another L-shaped duplex of an eclectic American Craftsman design has some uniquely ornate Italianate and Gothic variations in the cornice and living room windows. The pyramid-like cornice uses increasingly smaller belt courses to offset the attic window. The living room windows are bracketed by a basket-handle arch of Italianate derivation. The second floor window has a top piece that consists of seven encased pieces. The lower part consists of three separate panes. The lower window consists of a three-piece ribbon style. Irregular brick designs are crafted between the two windows. And quoins are used inside and outside the arch as decorative matter. The variably pitched, cross-gabled roof employs shingles. The gabled roof is also of irregular pitch with a significant eaves overhang and has a stepped brickwork design facing the street.. An eyebrow transom overhangs the main entrance, which is itself bracketed by another arch and quoin. There are clear, handsome gothic overtones in all of these details. All windows and doors are original, and they are protected by storm windows. The two-bay garage in the rear has a moderately pitched roof that is shingled over the hipped pyramidal form. Replacement doors have been added to the original garage of brick walls.

On the South side of the street sits this American Craftsman design with Prairie overtones. The roof has a quasi-parallel hipped on top of side-hipped gable finished off with shingles. Each of the four apartments has double doors that open on to a small porch. Windows made of glazed panes bracket each door set. The front access has a door of glazed panels again accented by narrow windows consisting of glazed panels. The overall effect is an elegant understated building. All windows and doors are original without any storm window protection.

**6615 San Bonita Avenue. 1924; Architect: Schuermann & Neumann; Builder: Schuermann & Neumann; Developer: Schuermann & Neumann (photos #25 & 26)**

On the north side of the street, this house is a classic example of what is known as Spanish Eclectic. The gabled roof is steeply pitted and still has its original Spanish mission ceramic tiles. Doors and windows are also original equipment. Note that the first floor windows and door are accentuated by concrete sculpture and quoins. The attic window and gambrel has panels. Living room windows maintain the ribbon style common to this block. The main entrance door has windowed panels. The two-car garage in back of the house has a side-gabled roof furnished with shingles. The garage doors are new replacements.

**6616 San Bonita Avenue, 1924; Architect: E A Wagner; Builder: E A Wagner; Developer: E A Wagner (Photos #27 & 28)**

This two-story, four-apartment building on the south side of the street has clear Adams Colonial overtones. The famous E A Wagner designed, developed, built and sold more buildings in the original HiPointe Addition than any other person. His architectural consistency and integrity comes through in this well designed building. Note the Adams style cornice above the second story in belt course fashion. Small, non-functional porches of wrought iron that allow the doors to be opened to let in air and light. The main entrance door is bracketed with ribbon window panes which has an overall checkerboard pattern. The main entrance and other door-windows of the first floor and the second story hallway window all have quoins that give an understated elegance to the simple design. The backyard garage has not been renovated. All doors and windows are originals that have not been replaced. Both structures use flat roofs.

**6619 San Bonita Avenue, 1924; Architect: Schuermann & Neumann; Builder: Schuermann & Neumann; Developer: Schuermann & Neumann (photos #29 & 30)**

This may be the most unusual of the L-shaped Spanish Eclectic style homes on San Bonita. Like many of the others it has its original and handsome Spanish Mission tiled roof. The roof structure is cross-gabled with drop eaves. Note that the windows are all original equipment. There is a paired attic window with glazed panes. The upper pane of the primary windows each has three panes of the same pattern. The lower story windows (including the transom) all have subtle arches built into the casements. Notice the irregular design of brickwork at the corners of the building and above the entrance and lower hallway window, which replaces the more familiar quoins of surrounding buildings. The upper story living room window is a bay window. The eclecticism is also seen in the use of wood beams in the attic and second-story levels to heighten esthetic interest.

According to owner, Charlie Darden who has researched the history of his building, this building and the five to its east (6615, 6611, 6607, 6603, 6541) were essentially built in 1924 but market forces conspired against Schuermann and Neumann and they could not finish and sell them until 1930 (when they appear on the St. Louis County Department of Revenue books.)

**6620 San Bonita Avenue. 1927; Architect: E A Wagner; Builder: E A Wagner; Developer: Sam Hamburg, Jr. (photo #31)**

On the South side of the street sits this American Craftsman design with Prairie overtones. This building design is the same as that of 6612 San Bonita Avenue. Note that E A Wagner's only architectural design and building in this subdivision involved the four buildings in a row from 6612 to 6624. He alternated the Prairie-Craftsman design with the Colonial Eclectic design on either side of this building. Sam Hamburg, Jr. was the developer and original owner of each of these four flats.

**6623 San Bonita Avenue. 1927; Architect: Schuermann & Neumann; Builder: Schuermann & Neumann; Developer: Schuermann & Neumann (photos #32 & 33)**

The last of seven buildings designed, constructed and sold through Schuermann and Neumann in the 6500-6600 block is this L-shaped American Craftsman design with Gothic overtones in the parapet. Note the eight-pointed star-square sculpture above the second floor window. Quoins and belt courses add interest to the design. The cross-gabled roof of shingles is partially hidden in the front by a parapet. The ribbon windows in the front are consistent with those throughout the neighborhood. All windows and doors are original, although the brickwork has been re-tuckpointed throughout. The doors and windows on the garage in the backyard appear to be the originals. The roof is low-pitched, of the side-gable variety.

**6625 San Bonita Avenue, 1930; Architect: unknown; Builder: unknown; Developer: unknown (photos #36 & 37)**

This L-shaped duplex is architecturally consistent with the seven duplexes to its east and is listed at the same time as them in the County of St. Louis Department of Revenue records so it is conceivable that it is another Schuermann and Neumann building but the City of Clayton records no longer exist to confirm this. It is essentially the same building layout as 6619 San Bonita Avenue by Schuermann and Neumann. However, the details of this duplex are consistent with American Craftsman rather than Spanish Eclectic. The three-window ribbon design is consistent with the rest of the neighborhood as is the use of quoins as accents. Similarly the windows are original and have the same upper panel design as found in the six Schuermann and Neumann designed buildings to the east. What is distinctive is the use of stucco and wood framing on the upper floor to make this house appear different from its sisters. The roof is cross-gabled and laid over with compositional shingles. The garage also uses the same side-gabled roofing style as its sisters. The two-car garage in back has recently been re-tuckpointed with the addition of new shingles and door. Original windows in the front of the house are protected by storm windows.

**6627 San Bonita Avenue. 1929; Architect: Muellenhoff Building & Realty; Builder: Muellenhoff Building and Realty; unknown; Developer: Arthur Fries (photos #38 & 39)**

This American Prairie styled duplex is the only building in the 6400-6700 blocks with a dormer. The roof is an unusual moderately pitched pyramidal design (for this block) with shingles. All windows are originals and have the same upper pane designs as the sister buildings east in the 6600-6500 blocks. This is true of the glazed panes in the upper and lower story doors. The building has sat inexplicably vacant for at least 20 years. The City forced the owners to put on a new roof, and air conditions, water pipes, etc. about 15 years ago. The two-bay garage in back no longer has its original door(s) and has recent been re-tuckpointed with a new roof laid of shingles. It has a low-pitched pyramidal design consistent with that of the duplex.

**6628 San Bonita Avenue, 1929; Architect: E A Wagner; Builder: E A Wagner; Developer: Sam Hamburg, Jr. (photos #40 & 41)**

This Spanish Eclectic two-story, four-flat apartment building still retains its false pitched roof with Spanish tiles although the actual roof is flat. The roof-façade has a triangular eyebrow dormer that is singular in the whole HiPointe area. The sharply pointed gable over the entrance way is also unique to the District. The quoins over the first floor windows are also uniquely shaped. All windows and doors are original following the common pattern of having the upper panes with smaller panes of an eight-over-one glazing pattern. Casements for windows are accents with concrete sills consistent with the neighborhood. There is a four-bay garage

**6629/6631 San Bonita Avenue. 1926; Architect: Ben Shapiro; Builder: Pomeroy Construction Co.: unknown; Developer: Sam Brown (photos #42 & 43)**

This two-story four-flat apartment building with a flat roof is of the Spanish Eclectic style and arguably the most ornately appointed building in the District. The parapet above and below the belt course has five ornate shields of armor in the carved, low-relief style of Plateresque and Churrigueresque. Four doors have half-moon low relief accents with numerous quoins added for accent. The porch also has pillars with accented sculptures and quoin. Urns adorn the ends of the porch. All doors and windows are original. Notice the unusual arches on either side of the building which are also unique to the District. The four-car garage in the rear no longer has its original doors but is original.

**6633 San Bonita Avenue, 1924; Architect: D. R. Harrison; Builder: Harrison Construction Co; Developer: Sam Jackaway (photos #46 & 47)**

This two-story duplex and its western neighbor 6637 were the first houses built in the 6500-6700 block. It is an L-shaped Spanish Eclectic style. The original Spanish tile over the false gabled roof (which is actually flat) was damaged by squirrels and replaced with shingles. All windows were replaced with energy efficient ones of the same design during the 1980s. The original coal-burning furnaces were replaced by oil burning types in the 1930s. In the 1980s both oil-burning furnaces died and were replaced with energy efficient natural gas burners. The hot water heating system of the 1930s has been replaced with air ducts and air conditioning added to both apartments. The doors over the upstairs porch are French doors. The present owners replaced kitchens and bathrooms with modern fixtures during the 1990s. The present owners re-tuckpointed the entire building in the late 1970s. False balconies to the west side are original as is the porch. Notice the original doors which have small panes of glass inset in a non-traditional door shape with a semi-circle at the top. There was a Spanish shield of armory in the middle of the cornice that was destroyed by lightening during the 1980s. The shared driveway and four-car garage were space-saving designs. The flat roofed garage has been re-tuckpointed and the windows replaced.

**6636 San Bonita Avenue. 1920; Architect: Unknown; Builder: Unknown; Developer: Unknown (photo #48)**

This American Craftsman building as two stories and four condominiums that were converted from apartments and completely refurbished with modern kitchen and bathroom appliances. Central air conditioning was also added at the same time around 2000. The windows follow the three-window ribbon style of the period. All windows have the same three-over-one pane style found throughout the 6500-6600 blocks. They have storm windows to protect them. Note the embellishments on the front of the building – white diamonds and squares and accented cornice with a medallion in the center near the roof-line. The doors have a casement that is embellished artistically overhead. The front door is bracketed by narrow, ribbon windows on each side. All windows and doors are originals.

**6637 San Bonita Avenue. 1924; Architect: D. R. Harrison; Builder: Harrison Construction Co; Developer: Sam Jackaway (photos #49)**

This building was built in an exact mirror image of its eastern neighbor 6633 San Bonita Avenue. Its owners have made the same modernizing improvements: re-tuckpointing, all new bathroom and kitchen facilities, air conditioning, and forced air furnaces that are natural gas burning. The original Spanish tile had the same squirrel damage and was replaced by shingles in the 1990s. The garage at the back has already been described as it is part of the 6633 San Bonita Avenue garage.

**6707 San Bonita Avenue. 1950; Architect: unknown; Builder: unknown.; Developer: unknown (photo 52)**

This Prairie Style building of four efficiency apartments is so well hidden at the end of the block that few people even know it exists because it is surrounded by thick groves of trees. It has a low-pitched gabled roof with large overhanging eaves. It is a one-story building that looks like a one-family house although it is not. The front has large areas of glass windows.

**1 Tuscan Park, 1928; Architect: Ray E. White; Builder: Ray E. White; Developer: Marjorie Shults (photo #119 & 120)**

This single-family residence was the first built in Tuscan Park and is of a Colonial Revival Design. The cross-gabled roof is laid with plain slate of different colors. The entrance way has a gabled porch with trusses sitting on brick pillars. Note the varying sized windows. The right side windows on both floors are of the double sash type with three-by-two panels for each sash. Simple wood frames make all of the windows stand out against the brick exterior. The door is of the batten type. First floor windows to the right side are of the arched type and are actually French doors with a two-by-four framed type with an arched transom of eight panes. Above them are the same types of windows seen to the far right of the main structure.

This classic two-story single-family residence is built in the Spanish Revival style. The roof is of the medium-pitched, cross-gabled variety laid with variegated Spanish tiles. The roof eaves show rafters. The upper story walls are of stucco; the lower story of stone. Note the large number of original windows of the arched style. Upper story windows are accentuated with stone and quoins. The lower windows are accentuated by varying the height of the stonework. Part of the esthetic beauty of this home comes through the variations in window and door sizes and shapes.

This is the only Dutch Colonial design in the Hi-Pointe Addition/Tuscany Park Historic District although several exist in the Hi-Pointe/De Mun Historic District. Note the signature, flared eaves on the two front gables. The roof is of a steep-pitched type that is hipped and laid with variegated slate. The walls use multi-colored brick. Note the interesting diamond brickwork on the left-most wall. The entranceway portion has a bay window of three parts with stained glass. The entrance uses an archway of various sized cut stones. Small windows bracket the front entrance with stained glass. The other downstairs windows also appear specially made and are inset with stained glass panels. The fireplace to the right has two flues and is of an unusual broken pattern design.

**4 Tuscany Park, 1931; Architect: Robert Denny; Builder: Ray E. White: unknown; Developer: Ray E. White (photo # 124 & 125)**

This Colonial Revival house is as a two-story, single-family residence. The roof is extremely complex starting with a basic hipped design of shingles. Smaller pyramidal caps are found over the entrance and left side. Although the walls are mostly of brick, note the cut stone used around the entranceway and the window with balcony above it. The doorway is arched with a glass-paneled door. French doors above the doorway have a complex of six-by-two panels of glazing. A false balcony stands in front of this window. The left side of the house has a bay window of four parts with nine panels of glass to each sash. A smaller three-by-two paneled transom allows even more light. The second story window on the left is a double-sash type of 2 panes in each. To the sides of the main window are matching narrow windows of multiple panes.

This is a Spanish Eclectic styled single-family residence of two stories. The basic exterior wall is of stucco but stone quoins are placed at corners and around the entranceway and window above it. The roof is steeply pitched and gabled with plain slate. Note the dormer windows on the second floor above the dark wood trim. The downstairs windows use simple dark wood casements with brick sills.

**6 Tuscany Park, 1932; Architect: George B. Willmerin; Builder: Glenn Stensen; Developer: Mae Kramer (photo #127)**

This interesting single-family house of two stories is primarily a Colonial Revival but has touches of Dutch Colonialism in the two gables on the roof. The primary roof is side-gabled with moderate pitch and is covered with shingles. Note the right hand gable has a diamond-pattern about the windows. There is a Richardsonian Romanesque pattern to this second-story part of the house on the right-hand side. These two windows also have the same diamond pattern to heir panes. The windows are framed by stone quoins. By contrast, the left-hand side gable has plain wood over a much simpler double-sash window with nine panels to each sash. The entrance way starts with a steep Dutch Colonial gable of formed concrete slabs set on quoins. Triangular designs of quoins are found at the foot of the doorway. A double archway attracts attention to the door. Both of the main windows downstairs are double windows with two sashes. Each has a white slab for a crown and brick sills.

This two-story single-family residence is in the Colonial Revival style. The roof is a low-pitched hipped style with shingles. The double windows are all double-sashed and original. The all have black shutters. The door is a vertical plain style set in an extension from the main house. There is a one-room extension of one story to the left that matches the rest of the house.

This two-story single-family residence is built in the Colonial Revivalist style. The roof is a moderately pitched cross-gabled pattern laid with plain slate. Over the entrance way is a half-timbered design with Tudor hints. An ornately carved archway frames the door. The right-most gable sits over a hidden window and a bay window on the first floor. The downstairs right-hand window is a massive collection of seven panels with multiple small panels. Windows upstairs have transom overhead and open outward in two parts. There is a non-contributing

**9 Tuscany Park, 1949; Architect: Frank J. Goebel; Builder: Frank J. Goebel; Developer: Frank J. Goebel (photo #132)**

This two-story single-family residence is built in a very modern version of the Colonial Revivalist style. The roof is moderately pitched and hipped with shingled overlaying it. The double-door entrance in black is offset with a white frame of marble. The upper windows are set in with a quasi-dormer flair and are each made of two sashes with eight panes in each. The lower left windows on the first floor have twelve panes in each of the two sashes. Smaller windows to the right on the first and second floors have six panes for each of the sashes. All windows are protected by storm windows. There are two chimneys – one at each end of the house.

This two-story single-family residence is built in the Colonial Revivalist style. The left-front roof is a flared steeply pitched style with shingled overlaying it. The rear roofing is side gabled with shingles. Dormers with four panes in which each part of the double sash are found at both ends of the left side of the house. Nine-paneled sashes are set in double-sash windows on the first floor. Shutters bracket the first floor windows. The front door has 12 small panes of glass at eye-level. Two side panels of six panes of glass bracket the door.

**11 Tuscany Park, 1931; Architect: Russell M. White; Builder: Russell M. White; Developer: William L. White (photo #134)**

This two-story single-family residence is built in the Colonial Revivalist style. It is the only symmetrical and rectangular building on the block. The entrance way has a porch of two parts held up by wooden columns with a balcony above. The primary windows are double-sash of six panes in each protected by storm windows. Old style lanterns contain the modern lighting on the porch. A ribbon-window of three pieces sits over the doorway on the second floor filled with stained glass. Light colored quoins crown the lower windows. The roof is a side gabled variety with eaves accented with brackets.

**12 Tuscany Park, 1958; Architect: Edward B. Kelley; Builder: Layton & Daily Construction; Developer: Layton & Daily Construction (photo #135)**

This two-story single-family residence is built in the Colonial Revivalist style that has the plainest front on the block. Four double-sash windows with eight panes each are framed by black shutters against the off-white brick. A low-pitched roof is laid with shingles. The doorway is framed by false white columns and crowned. An ornate storm door hides the front door.
