United States Department of the Interior National Park Service

National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x' in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

Narrative Description

(Describe the historic and current condition of the property on one or more continuation sheets.)

See continuation sheet(s) for Section No. 7

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☐ A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- **B** Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- **D** Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ A owned by a religious institution or used for religious purposes.
- **B** removed from its original location.
- \Box **C** a birthplace or grave.
- **D** a cemetery.
- **E** a reconstructed building, object, or structure.
- **F** a commemorative property.
- **G** less than 50 years of age or achieved significance within the past 50 years.

Narrative Statement of Significance

(Explain the significance of the property on one or more continuation sheets.)

9. Major Bibliographical References

Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

Summary:

The Courthouse-Seminary Neighborhood Historic District is on the east side of Cape Girardeau. southwest of the city's original location near the Mississippi riverfront. The district is located between Themis Street on the north and Morgan Oak on the south, roughly bounded by Main Street and Middle Street on the east and west. The area consists primarily of residential buildings, with a few commercial and institutional buildings scattered throughout the district. Within its approximately 13 block area there are a total of 199 resources, including 100 contributing and 28 noncontributing primary resources, 21 contributing and 26 noncontributing ancillary buildings, 2 contributing and 6 noncontributing vacant lots. In addition, there are 10 properties that were previously listed to the National Register of Historic Places, which contain 10 contributing primary resources, 2 contributing outbuildings, and 4 noncontributing outbuildings. The district is comprised of buildings constructed between 1821 and 2005 for middle and upper income residents. The buildings are one to two-and-a-half stories tall with stone or concrete foundations and primarily asphalt or asbestos shingle roofs. The contributing resources are primarily in the late 19th century revival styles or early 20th century American movements, with the majority of the homes built in the Colonial Revival, Craftsman, and Queen Anne styles. Many of the homes are vernacular forms, such as central passage, gable and wing, I-house and front gabled. Thirteen primary resources have been constructed in the district since the period of significance, but they do not significantly detract from the streetscapes, nor do they dramatically impact the setting, feeling, or overall design of the district. With a few exceptions, the buildings are in good to excellent condition and continue to reflect neighborhood design from its 1850-1948 period of significance.

Elaboration:

The Courthouse-Seminary Historic District is located approximately three blocks west of the Mississippi River. The area slopes toward the river, inclined more dramatically at the north end of the district. The streets "terrace" the neighborhood, creating street level entrances on the eastern side of the road and elevated homes on the western side of the street. At the turn of the 20th century, the Cape Girardeau and Chester Railroad followed South Fountain Street north, curving at William Street toward South Middle Street. The tracks have been taken up, but the bed is still evident, though the corner of South Fountain Street and William Street has been redeveloped into Indian Park. A commercial district along Broadway, Spanish, and Main Streets surrounds the north and east sides of the neighborhood. The old Cape Girardeau Court of Common Pleas anchors the northeast corner of the district, but is excluded from the boundaries. St. Vincent's Seminary (now used by Southeast Missouri State University as the "River Campus") and an old Mississippi River bridge access create a southern boundary, but are not included in the district.

The district is comprised of one and two-and-a-half story brick single-family homes, with multi-

```
Section number <u>7</u> Page <u>2</u> Courthouse-Seminary Neighborhood Historic District
Cape Girardeau County, MO
```

family homes and a few commercial buildings dispersed throughout. The district also features several historic religious facilities, as well as a historic elementary school (now used as City Hall). The streets are laid out in a grid pattern, with alleys dividing each block. Many of the properties include rear garages or other outbuildings that access the alley, though a few have access from the street. The primary resources share similar setbacks to their neighbors, but each side of each block has a slightly different setback and the lot sizes are inconsistent. The houses sit fairly close to each other, and many of the homes have large trees in the front yard. The Knights of Columbus Hall (Photo 17), Old St. Vincent Church (Photo 6), and New Lorimier Elementary School (Photo 18) feature open green space on their lots, as well as parking lots.

Most of the buildings in the district were constructed between 1890 and 1920, with ¼ of the primary resources constructed between 1900 and 1908. The oldest building in the district was constructed in c. 1848 at 9 North Fountain Street, and the most recent contributing primary resource was constructed in 1948 at 224A South Spanish Street. There are 100 contributing primary resources, and 21 contributing ancillary buildings which are not already listed to the National Register of Historic Places. Twelve primary resources and 21 of the ancillary buildings were constructed after the period of significance and are considered noncontributing. For the most part, the newly constructed buildings have a larger setback, and do not dramatically detract from the overall look of each street or district as a whole. Sixteen primary resources and 5 ancillary buildings constructed during the period of significance are considered noncontributing features such as windows, or the construction of additions that overwhelm the building's original form or design. There are 8 vacant lots dispersed throughout the district, two of which are considered contributing and 6 of which are considered noncontributing due to the sites.

A few of the buildings in the district embody high style designs, but for the most part the buildings exhibit vernacular national forms and building types. Many buildings reflect a mixture or elements of Revival Style designs, as well as early American Movement styles. There are also several Modern Movement buildings within the district, though most of these were constructed after the period of significance. The most common styles found within the district include Colonial Revival (Photo 1), Queen Anne (Photo 2), and Craftsman (Photo 3), though other styles are clearly identified, including Spanish Revival (Photo 4), Italianate (Photo 5), Late Gothic (Photo 6), Tudor Revival (Photo 7), Prairie (Photo 8), Shingle (Photo 9), Art Deco (Photo 10), and Folk Victorian (Photo 11). Some of the buildings do not possess enough architectural details from any one design to be designated a particular style. These buildings have been categorized by their forms, particularly I-house (Photo 12), gable and wing (Photo 13), front gable (Photo 14), pyramidal and central passage (Photo 15), and German Brick Cottage. A few of the buildings could not be classified with any particular form or style and are simply identified by their function, including three commercial buildings (Photo 19).

The buildings in the district were not constructed in any particular pattern, nor did expansion

```
Section number <u>7</u> Page <u>3</u> Courthouse-Seminary Neighborhood Historic District
Cape Girardeau County, MO
```

happen on one street prior to another. For this reason, an 1880 house may be located next to a 1920 house or a 1900 house. However, new infill has been primarily concentrated south of William Street. The buildings in the Courthouse-Seminary Historic District represent a unique grouping of turn-of-the-century upper- and middle- class buildings that have been fairly well preserved and relatively unchanged since construction. Other similar structures can be found throughout the eastern part of the city, expanding as far west as Kingshighway. However, few buildings constructed prior to 1890 can be found in concentrated groupings outside the district.

The following description of each resource is arranged alphabetically by street, with vacant lots included chronologically by address. Descriptions include address, date of construction, and dates of alterations (found in brackets) as listed in the city assessor's records and compared to Sanborn Fire Insurance Company maps and Thomason & Associate's Intensive Survey of the Downtown Commercial and Residential Area if Cape Girardeau¹. Many of these construction dates are not specifically known, and some were applied based on the first appearance on the Sanborn maps. The construction dates that are not known to the exact year are indicated as "circa" dates (i.e. circa 1880). The architectural style, architect or builder (if known), a narrative description, and outbuilding identification and description are also included. "Photo #" indicates an included image of the particular property, where as "Photo # Rep" indicates an included photo that represents a similar form/ architectural style.

Individual Property Descriptions

211 Aquamsi 1999, **1 NC** Photo # Rep 19 Property Type: Commercial Architectural Style/ Form: Other: Commercial Garage

A one story concrete commercial garage with a concrete foundation and a flat roof. Two overhead rolling metal garage doors are found on the east facing façade. The building was constructed after the period of significance and is considered noncontributing.

2 North Fountain1940, 2 CPhoto # 10Property Type: Multi-FamilyArchitectural Style/ Form: Modern Movement: Art Deco

A three story brick Art Deco building with a concrete foundation and a flat roof. The seven ranked building features one-over one-sash windows with stone sills. These windows are found in pairs in the outer bays. The central three bays are projected, with multiple projections extending the central entrance bay. The entrance has a modern wood and glass door. Concrete squares featuring pressed geometric designs are found between the first and second levels, and above the third level of the central bay. Terra cotta caps the central projection as it pushes beyond the roofline. A 1940, multi-car brick carport with a metal roof sits at the rear of the property and is considered contributing.

Section number <u>7</u> Page <u>4</u> Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

5 North Fountain 1913, **1 C** Photo # Rep 7 Property Type: Single-Family Architectural Style/ Form: Late 19th and 20th Century Revivals: Tudor Revival

A one-and-a-half story brick Tudor Revival style house with a concrete foundation and cross gabled roof. The entrance bay includes a wood and glass door with three rounded cascading brick surrounds. To the south of the door is a five-over-one sash window flanked by three-over-one sash windows with a soldier brick lintel and stone sill. A similar window and surrounds are found in the gable. An enclosed wood porch with a shed roof projects in the southern bay, featuring five full height windows. Despite the enclosure of the porch, the building continues to convey its major architectural details and is not dramatically impacted by the new material.

9 North Fountain Steinbeck- Brock House c. 1848, **1 C** Photo # Rep 15 Property Type: Single-Family Architectural Style/ Form: Other: Central Passage

A one story brick house with a stone foundation and a side gabled roof. The five ranked building has a central wood and glass door with transom. Two-over-two wood segmental arch sash windows with stone sills and segmental arched brick lintels fill the remaining openings. A one story porch with wood columns and a flat roof covers the central three bays.

13 North Fountain 1965, 1 NC

Property Type: Multi-Family Architectural Style/ Form: Modern Movement

A two story brick apartment building with a concrete foundation and a gabled roof. The east facing elevation has two sliding sash windows on the first and second levels, with brick quoining at the corners and a wide overhanging eave. Access to each unit is located on the northern elevation. These entrances feature a wood door with metal storm door and a two pane sliding window with soldier brick lintels beside the door. Concrete square columns hold the second level deck, which is accessed by two metal stairwells and supported by iron columns. The building was constructed after the period of significance and is considered noncontributing.

14 North Fountain1893, **1 NC**Photo # 16Property Type: Multi-FamilyArchitectural Style/ Form: Other: Stack House

A narrow two story vinyl sided house with a stone foundation and a side gabled roof. The first level fenestration is comprised of two wood panel doors and a metal sash window in the southern bay. A hipped roof porch is supported by wood posts. A single metal sash window is centered on the second level. The addition of new facing material, as well as the replacement of

Section number <u>7</u> Page <u>5</u> Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

the original windows with metal windows, and the installation of a second door on the main level significantly alter the form and design of the building.

16 North Fountain 1895, 2 C Photo # Rep 2

Property Type: Single-Family Architectural Style/ Form: Late Victorian: Queen Anne

A two-and-a-half story brick Queen Anne style house with a stone founation and a cross gabled roof. A one-story hipped roof porch wraps around from the western façade to the southern elevation. The porch is supported by simple wood columns. The lower level is undergoing remodeling, and the openings are covered. The second level projection features two sash windows with stone sills and segmental arched brick lintels. A round window is located in the gable. A single window is found on the second level of the wing. A wide bracketed cornice, broken at the gable, extends around the house. Despite the construction on the lower level, the building continues to express its original design and form. A 1920 gabled brick garage sits at the southeast corner of the property and is considered contributing.

19 North Fountain 1901 [1920], 1 C Photo # Rep 8

Property Type: Single-Family

Architectural Style/ Form: Late 19th and Early 20th Century American Movements: Prairie

A two-and-a-half story Prairie style house with a concrete foundation and a hipped roof. The three ranked building features a full width porch with square columns and a tile floor. The entrance is located in the northern bay, consisting of a wood and glass door and wood screen door. The remaining openings consist of six-over-one wood windows. One-over-eight sash windows are paired in the hipped dormer. A 1920 cross hipped extention is located at the northwestern corner of the building.

25 North Fountain Briney House 1904-1906 [1994], **1 C** Photo # Rep 2 Property Type: Single-Family Architectural Style/ Form: Late Victorian: Queen Anne

A two-and-a-half story brick Queen Anne Style house with a stone foundation and a hipped roof. A one-story porch with paired classical columns wraps around the eastern façade to the southern elevation. The entrance includes a wood and glass door with transom, and is located just north of center. It is flanked by wide wood sash windows with segmental arched brick lintels and stone sills. A similar window and surround is found in the southern bay of the second level. A second story bay with gabled roof is found in the northern bay and features fish scale shingling and three sash windows. A cornice molding separates these windows from a painted sunburst over the central window and the triangular window in the dormer's molded gable. A triangular eyebrow window is located above the southern bay.

Section number 7 Page 6 Cou

28 North Fountain 1925, 2 C Photo # Rep 3

Property Type: Multi-Family

Architectural Style/ Form: Late 19th and Early 20th Century American Movements: Craftsman

A two story brick apartment with a concrete foundation and a flat roof. Two wood and glass doors are located in the northern bay. The opening in the southern bay and the two openings on the second level are filled with one-over-one sash windows with stone sills. A full width porch with exposed rafters is supported by brick columns. The shed roof porch is gabled over the entrance and has wide brackets. A pent roof covers the second level windows, with exposed rafters and wide knee brackets. The porch and pent roof are topped by a rust colored terra cotta tile. Brick piers push above the flat roofline at the wall corners. A 1925 gabled garage sits at the rear of the property and is considered contributing.

29 North Fountain 1959, 1 NC/ 1 C

Property Type: Single-Family

Architectural Style/ Form: Modern Movement

A one story brick house with a concrete foundation and a hipped roof. The three ranked façade includes a projection in the southern bay and a carport in the northern bay. A large picture window is in the projection. Two-over-two sash windows are paired on the remaining elevation. The door is found on the north wall of the projection. Metal poles support the carport and porch. The building was constructed after the period of significance and is considered noncontributing. A one story, 1930 shed with a double wood door entrance and asbestos shingle pyramid roof is located at the northwestern corner of the property.

31 North Fountain 1920 [1995], 1 C Photo # Rep 1

Property Type: Single-Family Architectural Style/ Form: Late 19th and 20th Century Revivals: Colonial Revival

A one-and-a-half story brick Colonial Revival style house with a concrete foundation and a side gabled roof. The central wood and glass door is capped by a sunburst window. A portico with classical columns and a brick knee wall features concrete stairs. Eight-over-eight wood windows with rounded transoms, round arched brick lintels, and stone sills flank the entrance bay. Round arch dormers with wide hood moldings push through the roofline above the outer bays.

34 North Fountain 1908 [1991], **1 C** Photo # Rep 9

Property Type: Single-Family Architectural Style/ Form: Late Victorian: Queen Anne

A two story gable and wing house with Late Victorian details, a stone foundation, and a hipped roof. The façade features a two-story bay window and a projecting cross gable with chamfered corners. The southern bay window has a flat roof. A one-story porch with turned spindle wood supports and scroll work brackets extends from the southern corner to the first window of the

Section number <u>7</u> Page <u>7</u> Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

northern bay. The two-pane wood and glass door has a rectangular transom window. The windows on the facade are one-over-one wood sash, with a stained glass ornamentation on the second level windows. Slightly pedimented wood surrounds ornament all of the openings. A bracketed cornice runs along the roof line. The presence of vinyl siding does not significantly detract from the building's overall character and design.

38 North Fountain 1890 [1989], **1 C** Photo # Rep 3 Property Type: Single-Family Architectural Style/ Form: Late 19th and Early 20th Century American Movements: Craftsman

A one-and-a half story bungalow with a concrete foundation and stucco cladding. The symmetrical façade features a full width, one story porch with square columns. The central wood door includes full height sidelights. One-over-one sash windows flank the entrance. Two sets of paired sash windows and a single central sash window (all of which were replaced in the last 10 years) are found in the shed dormer.

6 South Fountain Clark, George Boardman, House, 1882 [2004], **NR** Photo # Rep 2 Property Type: Single-Family Architectural Style/ Form: Late Victorian: Queen Anne Architect: Deane, Edwin Branch

A two-and-a-half story brick Queen Anne house with a stone foundation and a cross gabled roof. The west, main façade features the cross gabled projection on the southern half of the building. Featuring classical columns, turned spindle balustrade, and a wide cornice, a two story porch covers most of the cross gable, with only an ocular window and the decorative verge board peaking out above it. A similar porch covers the wing portion of the facade. The entrance is located on the wing near the corner created by the projecting cross gable. The windows are two-over-two wood with segmental arched brick lintels and stone sills. A noncontributing brick, gabled carriage house sits at the south side of the property. Though it was originally cosntructed in 1882, the building received an addition and new roof since construction.

214 Good Hope 1 C

Property Type: Lot Architectural Style/ Form: N/A

According to Sanborn maps, this lot has always been vacant.

215 Good Hope 1920 [1991], 1 C/ 1 NC Photo # Rep 3

Property Type: Single-Family Architectural Style/ Form: Late 19th and Early 20th Cen. American Movements: Craftsman

A one-and-a-half story brick house with a concrete foundation and a front gabled roof. A full width brick porch with a stucco porch gable is supported by brick columns, with addition support from squat brick columns topped by slender concrete posts. The central wood door features

Section number <u>7</u> Page <u>8</u>

Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

multilight glazing and a metal storm door. Five-over-one wood windows flank the entrance. All the openings feature segmental arched brick lintels. Paired one-over-one sash windows are found in the gable. A one story garage was constructed at the southwest of the property in the 1920s. This garage has been remodeled and now displays a rolling garage door and modern metal entrace door with vinyl siding. The new materials overwhelm the original design and the building is considered noncontributing.

222 Good Hope 1897 [1975], **2 C** Photo # Rep 1

Property Type: Single-Family Architectural Style/ Form: Late 19th and 20th Cen. Revivals: Colonial Revival

A two story brick house with a stone foundation and a hipped roof. A full width porch with classical columns and a hipped roof covers the first level. A wood door is located in the western bay, and paired two-over-two wood windows are found in the eastern bay. The paired windows are also found in eastern bay of the second floor, and a single wood window is found in the western bay of this level. All the openings are ornamented by segmental arched brick lintels, and the windows have stone sills. A one-story brick garage with a pyramidal roof faces the alley. Though new windows have been added, the building continues to reflect its original 1940 design and is considered contributing.

224 Good Hope c. 1880 [1915-1923], **2 C** Photo # Rep 13 Property Type: Single-Family Architectural Style/ Form: Other: Gable and Wing

A one-and-a-half story brick house with a stone foundation and a cross gabled roof. The projecting gable creates the northern bay, featuring two modern sash windows with stone sills and segmental arched brick lintels. A pointed arch window is located in the gable. The wood door and transom are located on the eastern elevation of this projection, below a shed roof porch with recently replaced wood supports. A single sash window is located in the eastern bay of the main elevation. A wood cornice ornaments the porch, and a broken brick cornice with minimal corbeling ornaments the roofline. A rear garage was constructed between 1915 and 1923.

230 Good Hope 1902, **1 C** Photo # Rep 15 Property Type: Single-Family Architectural Style/ Form: Other: Central Passage

A one-and-a-half story brick house with a stone foundation and side gabled roof with a central cross gable. The five ranked building features two-over-two wood windows with stone sills and arched brick lintels, as well as metal awnings. The modern wood and glass door with historic transom are centered on the building. The gabled entrance portico with concrete squat piers and wood supports is centered on the building. A round arched window is found in the cross gable.

Section number <u>7</u> Page <u>9</u> Courtho

231 Good Hope c. 1925, **1 C** Photo # Rep 3 Property Type: Single-Family Architectural Style/ Form: Late 19th and Early 20th Cen. American Movements: Craftsman

A one-and-a-half story brick bungalow with a concrete foundation and a side gabled roof. The full width porch features brick pillars and corner brackets. The central door features a modern wood and glass door with a rectangular transom and modern sidelights. The western bay includes a single one-over-one sash window. The eastern bay features a three part wood window. A stucco gabled dormer with knee brackets and three sash windows is centered on the roof.

232 Good Hope c. 1900 , **1 C/ 1 NC** Photo # 12 Property Type: Single-Family Architectural Style/ Form: Other: I-house

A two story brick house with a stone foundation and a side gabled roof and rear ell. The five ranked building features two-over-two wood windows with segmental arched brick lintels and stone sills. The central entrance door is slightly recessed, featuring a colored glass and wood entrance door and transom. A concrete stoop leads to the entrance. Despite the poor condition of a few windows, and the replacement of one with a metal sash window, the building continues to represent its original form and design. In addition, some remnants of an original cornice can be seen in the side gables. A one story brick outbuilding, constructed in 1930, sits at the rear of the property. Though it was constructed during the period of significance, a modern porch has been added and the windows and doors have been replaced. These changes have dramatically affected the buildings ability to convery its historic character, and combined with the building's poor condition, it is considered noncontributing.

235 Good Hope1900 [1986], **1 C**Photo # Rep 13Property Type: Single-FamilyArchitectural Style/ Form: Other: Gable and Wing

A one-and-a-half story brick gable and winge style house with late victorian detailing, a stone foundation and a shingle, cross gable roof. The entrance is located near the corner of the wing projection, featuring the orginal wood door and transom window (though covered by a storm door). A four-over-four sash window is found to the west of the entrance and on the eastern projection. A shed roof porch is ornamented with classical columns and a turned spindle balustrade. The gable ends feature scroll cut verge boards.

A two-story brick school building with a concrete foundation and a cross gabled roof. The asymmetrical façade inlcudes an eastern gabled projection and a western gabled projection. The eastern projection features two sash windows on the first and second levels, with brick

Section number <u>7</u> Page <u>13</u> Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

quoining at the corners. The building's central core incldues metal and glass single door entrances with rectangular transoms in the outer bays. These entrances are ornamented by stone surrounds that feature finials above carved name plates (now covered by metal signs that read "City Hall"). Rounded full story openings featuring sash windows and boarded over transoms and stone surrounds are located above the entrances on the second level. The four remaining bays contain sash windows with boarded over transoms. Brick corbelling is found at the roofline. The western projection is only a story and a half tall. The projecting entrance includes double metal and glass doors featuring a rounded transom light, stone keystone, and metal roof. A roundel is found in the gable.

2 North Lorimier 1880, 1 C/ 1 NC Photo # Rep 2

Property Type: Single-Family Architectural Style/ Form: Late Victorian: Queen Anne

A two story brick house with a rusticated stone foundation and a cross gabled roof. The projecting gable extends south toward Independence Street, with decorated verge board and a thick wood cornice that wraps around to the eastern wing. The fenestration of the projection includes wood sash windows found in triplicate on the first level and paired on the second level. A round arch vent is found in the gable. The original entrance to the building was on the eastern wing, but is now obscured by an enclosed shed roof porch, which features segmental arched display windows. Above the porch, a wood door is found near the corner created by the projection, and a single sash window fills the eastern bay. All of the windows have stone sills and segmental arched brick lintels. Metal finials are found at the gable ends. A recent one-story addition to the rear of the building changed the entrance facade from the southern to the western elevation. The original brick building retains the wood sash windows on the western facade. The one story wood paneled addition is comprised of a small porch with simple supports and a side gabled roof. The entrance consists of a simple wood door. The addition does not significantly detract from the building's historical design. A one-story outbuilding was constructed on the northwestern corner of the property in 1996. The side gabled building features three large metal display windows, with two glass and metal doors in the southern bay. The structure is connected to the addition of the original building by a small enclosed walkway. Despite its physical connection to the primary structure, the outbuilding is clearly a seprate building that could easily be disconnected by removing the frame walkway.

18 North Lorimier, 1NC

Property Type: Lot

Property Type: Multi-Family Architectural Style/ Form: Modern Movement

A two story brick apartment building with a concrete foundation and a front gable roof. The street facing façade is completely covered in vinyl siding with no openings. The entrances are on the southern façade, and unseen from the street. The building was constructed after the period of significance and is considered noncontributing.

142-148 South Lorimier 1925, 1 C

Property Type: Multi-Family Architectural Style/ Form: Late 19th and Early 20th Century American Movements

A two-story brick "U" shape apartment building with a concrete foundation and a flat roof. The building features wood doors and eight-over-one wood windows in each bay. Many of the doors and windows have been boarded over for security reasons. The outer wings extend toward the street, with projecting brick porches featuring glazed brick, soldier brick, and metal cornice ornamentation. A straight parapet wall with corner piers caps each projection.

143 South Lorimier 1910, 1 C

Property Type: Single-Family American Movements Architect: Gerhart, J. W. Architectural Style/ Form: Late 19th and Early 20th Century

A one-and-a-half story brick bungalow with a concrete foundation and a terra cotta tile side gabled roof. An enclosed porch with two-over-four wood windows covers all but the entrance bay of the first level. The three-over three glazed wood door with multi-light sidelights and transom fills the northern bay. Exposed rafters ornament the roofline. A shed dormer features two sets of paired four-over-one wood windows, the northern most window containing an air conditioning unit.

150 South Lorimier 1910 [c.2002], **1 C** Property Type: Multi-Family Architectural Style/ Form: Late 19th and Early 20th Cen. American Movements

A one-and-a-half story craftsman house with a concrete foundation and a front gabled roof. The round window wood door with sidelights is centered on the façade, with three-over-one wood sash windows found in tripilicate on both sides of the entrance. These windows are repeated in the half-story. Simple pillars and spindles support the dentiled, overhanging porch. The upper level is covrred with asbestos shingles below the roof's wide overhanging eaves. Though the upper level has a modern material covering the historic facing it does not significantly detract from the building's integrity.

201 South Lorimier 1900, 1 C/ 1NC

Property Type: Multi-Family Architectural Style/ Form: Late 19th and Early 20th Cen. American Movements

A two-story brick 4-plex apartment building with a concrete foundation and a low pitched hip roof. The façade is symmetrically divided in half, with gabled porches featuring brick square columns covering the outer bays of the first level. Two modern wood doors are located on each porch. Paired one-over-one vinyl windows with concrete sills fill the two central bays on both levels. The outer bays of the second level feature one-over one wood windows. A shed dormer with two wood vents is centered on the roof. A 1970, three bay carport with a flat, corrugated metal roof sits at the rear of the property.

209 South Lorimier 1 NC

Property Type: Lot Architectural Style/ Form: N/A

The 1931 Sanborn map shows two buildings on this property. These buildings were torn down after 2008 and the period of significance and the lot is considered noncontributing.

212 South Lorimier 1972, 1 NC

Property Type: Multi-Family Architectural Style/ Form: Modern Movement

A three story brick apartment building with a concrete foundation and a flat roof. The short side of this rectangular building faces the street, with entrances facing the parking lot on the north. The building includes wood doors and paired metal sash windows. A single, sliding metal window is found on each level of the street facing facade. The building was constructed after the period of significance and is considered noncontributing.

213 South Lorimier 1900 [2009], **1 C** Photo # Rep 12 Property Type: Single-Family Architectural Style/ Form: Other: I-house

A two story I-house with a stone foundation and a side gabled roof. The three ranked building features two-over-two wood windows. A modern wood door is centered on the first level. A full width shed roof porch (added after 2008) is supported by turned spindle posts. despite the application of vinyl siding, the building continues to express its form and most of its original design qualities.

216 South Lorimier1900, **1 NC**Photo # Rep 14Property Type: Single-FamilyArchitectural Style/ Form: Other: Gable Front

A two story brick and wood gable front house with a stone foundation. The second level features paired metal sash windows. Paired sash windows with applied mullians and a boarded

Section number <u>7</u> Page <u>23</u> Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

transom are located in the northern bay of the first level. A small wood window and wood door with transom light and concrete stair are found in the southern bay. A shed roof porch with wood cornice covers the first level, with thin pillars extending from a concrete slab. The lack of a raised porch significantly alters the facade of this building, resulting in a noncontributing classification. The construction of a raised porch would warrant the reassessment of the property's integrity.

220 South Lorimier 1875 [c1950], **1 NC** Photo # Rep 13 Property Type: Single-Family Architectural Style/ Form: Other: Gable and Wing

A one-and-a-half story gable and wing house with a stone foundation and shingle roof. The projecting wing is located on the northern end of the façade, featuring paired metal sash windows. The wood door with metal storm door entrance is located on the southern wall of the projection. A shed roof supported by metal posts extends over the concrete porch and sash window in the southern bay. The application of modern siding, installation of new windows, and porch alterations significantly affect the historic character of the property and it is considered noncontributing.

223 South Lorimier 1920, 1 C

Property Type: Single Family Architectural Style/ Form: Other

A one story gable and wing house with a concrete foundation. The building retains its original wood and glass entrance and wood windows, but the original facing material has been replaced or covered with vinyl siding. Despite the material change, the building continues to express the form and design it posessed during the period of significance.

224 South Lorimier 1968, 1 NC

Property Type: Multi-Family Architectural Style/ Form: Modern Movement

A one story brick apartment building with a concrete foundation and a flat roof. The short side of this rectangular structure faces the street, featuring two small metal windows. The entrances are located on the northern elevation, and unseen from the street. The building was cosntructed after the period of significance and is considered noncontributing.

225 South Lorimier 1863[c.1990], **2 NC** Photo # Rep 15 Property Type: Single-Family Architectural Style/ Form: Other: German Cottage

A one-and-a-half story wood frame house with a concrete foundation and a side gabled roof. The first level has been covered in a brick veneer, and features a modern wood door flanked by by metal six-over-one sash windows. The shed dormer includes two four-pane windows. The application of a new door, windows, and brick veneer significantly alters the look of the building and dramatically impact its ablitiy to convey its original design. It is considered noncontributing.

Section number 7 Page 24 Courthouse-Seminary Neighborhood Historic District Cape Girardeau County, MO

A modern 1990 metal outbuilding sits at the rear of the property and is considered noncontributing because it was constructed after the period of significance.

227 South Lorimier 1850 [c. 2008], **2 C** Photo # Rep 15 Property Type: Single-Family Architectural Style/ Form: Other: Double Pen

A one-and-a-half story brick house with a raised stone foundation and a side gabled roof. Two modern wood doors with wood transom windows are centered on the façade, flanked by two modern sash windows with segmental arched brick lintels and stone sills. A corbeled brick cornice runs along the roofline. The lower third of the facade has been re-bricked. Despite the changes, the building continues to reflect its original form and conveys most of its original details. A large metal and wood shed with a side gabled roof was constructed near the property c. 1900.

229 South Lorimier 1900 [1940], **2 NC** Photo # Rep 13

Property Type: Single-Family Architectural Style/ Form: Other: Gable and Wing

A one-and-a-half story vertical wood paneled house with a stone foundation and a cross gabled roof. A one-story shed roof porch covers the wood door and two-over-two wood window of the southern bay. The northern bay features a projecting bay windows that has been paneled over. Decorated verge board ornaments the cross gable above a wood sash window. The application of the vertical wood paneling to the bay window significantly alters the look of the building, The building is considered noncontributing, but its status should be reevaluated if the paneling is removed. A 1955 modern garage sits at the rear of the property and is considered noncontributing.

230 South Lorimier 1938, 1 C/ 1 NC Photo # 7

Property Type: Single-Family Architectural Style/ Form: Late 19th and 20th Century Revivals: Tudor Revival

A one-and-a-half story brick Tudor Revival style house with a concrete foundation and a steeply pitched roof. The six light wood door is covered by a metal and glass storm door and located in the southern bay. The entrance is ornamented by a glazed brick surround, metal awning, and steeply pitched cross gable. The remaining two bays feature paired metal window with metal awnings. A 1970, modern garage sits at the southeast corner of the property and is considered noncontributing.

National Register of Historic Places Continuation Sheet

Section number <u>8</u> Page <u>44</u> Courthouse- Seminary Neighborhood Historic District Cape Girardeau County, MO

Summary:

The Courthouse- Seminary Neighborhood Historic District is locally significant under National Register Criterion C in the area of Architecture. Located in the southern part of Cape Girardeau's original plat, the district is a good example of an intact, middle and upper class neighborhood constructed between c. 1848 and 1948, the period of significance. Redeveloping an area of the city destroyed by an 1850 tornado, the buildings in the district were primarily constructed between 1890 and 1920, the period when Cape Girardeau's economy expanded due to rail service. Built in conjunction with a surge in population, the district buildings represent architectural forms and designs popular at the turn-of-the-century. The district primarily contains one-and-a-half to two-and-a-half story brick homes constructed in national house forms and period styles. Utilizing local materials and including vernacular property types, the buildings represent Late Victorian, Revival Style and early 20th century American movements. Unlike the smaller buildings constructed in the working class neighborhoods to the south and west, the buildings in the Courthouse-Seminary district represent high style designs, though some of the buildings have more muted decorations. Overall the district is well preserved and in excellent condition, reflecting the architectural style and form associated with Cape Girardeau's development between c.1848 and 1948, the period from construction of the oldest contributing building to the construction of the last contributing building and the most significant period of development and construction in the district.

Elaboration:

Early Development

Cape Girardeau was founded as a trading post by French entrepreneur Jean Baptiste Girardot around 1733. As the "Louisiana Territory" was passed from France to Spain in 1762, the Spanish divided the massive region into districts and encouraged settlement by French, Spanish, Italian, German and American immigrants. Using property rights to secure allegiance for the crown, Spain granted acreage with no taxes to all who took an oath of loyalty to the Spanish king.¹

Louis Lorimier took advantage of the offer, and was granted approximately six thousand acres just south of Girardot's trading post in 1796. The Spanish appointed Lorimier commandant of the Cape Girardeau district, and as such he controlled the trade with cargo boats delivering dry goods and furs to the area. The success of Lorimier's post drew settlers and businesses to the surrounding area, and by 1803 nearly 1000 people resided near "Cape Girardeau." The small village was laid out in a grid by 1806, bounded by North, William, Middle, and Water Streets, centered around a two block public square with most of the businesses located along the river (See Figure 1: Map of Cape Girardeau).² Though it was an established trading post, the

residential neighborhoods lacked a sense of permanence in their poorly maintained log cabins and impassable eroded streets.

The coming of the steamboats in the 1830s caused a population and building surge in the town. More substantial brick warehouses, churches, public buildings, and educational structures as well as frame homes and buildings were established during this decade. This includes St. Vincent's Catholic Church, which was constructed at the corner of Spanish and William Streets in 1838, as well as St. Vincent's College (later know as St. Vincent's Seminary) which was constructed that same year just south of the town (now at Spanish and Morgan Oak Streets). A Baptist Church was also established on Lorimier Street between Themis and Independence Streets (nonextant).³

The town's growth between 1830 and 1850 was substantial, but in vain. On November 27, 1850 a tornado swept up from the southwest, hitting the southern portion of the village. Nearly a hundred homes were lost to the twister, as well as St. Vincent's Catholic Church. Damage to warehouses and steamboats on the riverfront forever changed the town's focus and design, as Cape Girardeau began to rebuild. St. Vincent's Church was reconstructed and the new Common Pleas Courthouse was established on the public square. But the Civil War also struck this small Missouri town, keeping population and building relatively stagnant. ⁴

Little construction occurred in the town until the 1880s. Cape Girardeau constructed its first city school, Lorimier School, with much debate, scuffle, and objection in 1872 at the corner of Independence and Fountain Streets (nonextant). Though most of Cape Girardeau's residents preferred the private education offered at St. Vincent's Parochial School (located on the St. Vincent Church Grounds- now a parking lot) and Trinity Lutheran School, a county public school was offered and pressure to open a city school began as early as 1867.⁵

Residential Redevelopment

Louis Houck's promise of a completed connection to the Iron Mountain railroad by 1881 appears to have prompted rebuilding in the city's downtown. Though the population only increased from 3,889 people to 4,297 people between 1880 and 1890, nearly thirty new homes were constructed in the district during this period. The population nearly doubled a decade later, from 4,851 people in 1900 to 8,475 people in 1910. The district also saw a corresponding boom in construction at this time as nearly 45 new houses were built.⁶

Section number <u>8</u> Page <u>46</u> Courthouse- Seminary Neighborhood Historic District Cape Girardeau County, MO

The boundary for the district encompasses nearly all of the residential neighborhoods within the southern half of the city's original limits, with the inclusion of four addition blocks south of William. With the public school included in the district, the city's fire station located a block west of the district at the corner of Fredrick and Independence Streets, and the Court of Common Pleas located just outside the district. The constable lived on North Lorimier, along with the city's mail man and post office clerk. A plumber and an engineer that worked for the city both resided on South Lorimier Street, and South Spanish was home to the Sherriff's deputy, a fireman, and some other general city workers.⁷

The residents of the district were middle and upper class families. Lawyers, physicians, and architects with their own practices in the adjoining commercial district (see attached boundary map) could be found on Lorimier, Themis and Good Hope Streets. Many independent business owners also resided in the district, including barbers, a dress maker, a grocer, hardware store merchants, music teachers, life insurance agents, and saloon keepers. The close proximity of the commercial district on Broadway, Main, and Spanish Streets allowed the business owners and workers to travel easily to work by foot, and later by streetcar.⁸

Very few of the home owners worked as laborers in factories or doing odd jobs, but many acted as supervisors or dealers for the M. E. Lemming Saw Mill and Lumber Yard south of the city, the Roberts, Johnson and Rand Shoe Company on North Main Street, and the flour mills within the city. That is not so say that factory workers were not residents of the district, as some were found in apartment buildings or boarding houses. Other occupations held by residents included elevator operators, book keepers, retail managers, and secretaries. A few of the home owners were independently wealthy, and even at a fairly young age did not hold down a specific occupation.⁹

For the most part, the married women did not work, relying on their husbands and older sons for income. Some of the younger, unmarried women that lived in the district worked as stenographers for local businesses or teachers at the nearby schools, but for the most part they lived at home with their parents and did not work. A few of the young women in the district attended the Southeast Missouri State Normal School just west of the city limits. Though St. Vincent's College (just south of the district) was a boarding school for seminarians, some young men remained in their parents' homes while attending the college.¹⁰

Transportation was a vital part of the city's economy from its early trading post days, not only for the goods that were brought to and from the city, but also because of the jobs it created. The railroad became the primary means for transporting goods to and from the city when Houck extended the line in 1881, but the arrival of passenger trains did not occur until 1904 when the

San Francisco Railroad routed its tracks along Water Street. In the mean time, ferries took people north and south, and across the river. Workers for the ferries lived on South Spanish, with a short walk to the riverfront. The location of Houck's railroad depot near the corner of Middle and Independence Streets caused many of the engineers and supervisors for the railroad to live on Lorimier, Themis, and Fountain Streets. Also taking advantage of Cape Girardeau's new connection to the world, a few traveling salesmen made their homes in the district.¹¹

Travel around town was primarily by wagon or on foot at the end of the 19th century, but electrification of the city's street car in 1905 allowed citizens to make "the loop" around the downtown (See Figure 1). Automobiles did not become a major means of transportation for Cape Girardeau until the end of the 1910s. The switch to local automobile travel is evident in the construction of garages along the allies, which begin to appear after 1915.¹²

The residents of the district were in close proximity to the city's commercial area, located on North Main, Spanish, and Broadway. However, a few small businesses were established within the neighborhood. As the automobile was embraced by residents, dealerships, repair shops, and service stations were established within and near the district. Selling and utilizing the materials and supplies brought by the railroad, and later the interstate bridge (constructed 1928), the local business owners primarily served the district community.¹³

The district's neighborhood identity fostered a spirit of community during the 1920s and 1930s. The majority of the district was constructed by 1921, and by the end of the decade all of the streets were widened and paved. Each street established its own baseball team and after a 1926 fire destroyed the 1842 St. Vincent's Academy (where the Knights of Columbus Hall now sits), the neighborhood played on the empty lot. This was also the site of the Municipal Band concerts in the 1930s.¹⁴ The city's rapid expansion at the turn-of-the-century resulted in the establishment of six grammar school districts, each requiring construction of a new building. In 1935 the city's oldest school district finally received a new building, replacing the 1872 Old Lorimier School with a new building that could hold many more pupils. This new school received an additional wing two years later, offering eight additional classrooms.¹⁵ Keeping their focus on children during this decade, the city also closed Independence Street between Fountain and Spanish, and Lorimier between Themis and Merriwether when it snowed so that children could go sledding.¹⁶

The 1940s was a slow growth decade for Cape Girardeau, and most of the limited growth occurred at the city's western edge. During this period three commercial buildings filled empty lots, and an apartment building replaced a burned home in the district.¹⁷ In 1949, a tornado again struck Cape Girardeau, destroying 202 houses and damaging 231 more.¹⁸ While the buildings in the district required some repair, the area between the courthouse and seminary was spared from most of the destruction, and the turn-of-the-century buildings were retained. Focus in the city shifted to the western edge after 1950, with new shopping centers opening on Kingshighway in the 1960s and the arrival of the new Interstate 55 in 1972. Construction of a few apartment buildings in the 1960s, and a hotel near the interstate bridge in the 1970s created a few holes in the streetscape, but for the most part the buildings remained unchanged and many fell into disrepair. Renewed interest in the riverfront, the reconstruction of a new interstate bridge, the reuse of St. Vincent's Seminary by Southeast Missouri State University, and organized redevelopment efforts in the historic downtown on North Main, North Spanish, and Broadway occurred at the beginning of the 21st century, and has encouraged the preservation and restoration of many of the buildings within the district.

Residents and their Homes

The close proximity of the commercial district on Main, Spanish, and Broadway caused many of the local businessmen to build their homes between Broadway and Morgan Oak, expanding only a few blocks west of the river. The more prominent citizens constructed the more high style and elaborate homes, while the middle class residents typically built in simple forms and applied some ornamentation to their homes that imitated the popular styles.

There are several large houses within the district that stand out as high style or noteworthy because of their size. The owners were typically of Cape Girardeau's upper society, and exhibited their wealth by hiring architects to design elaborate homes. One example is the Glenn House (325 South Spanish, NR listed 10/11/79), an elaborate two-and-a-half-story Queen Anne that was home to David Andrew Glenn, a prominent banker and founder of the Glenn Mercantile Company on Main Street.¹⁹ The protruding rounded porch and central pyramidal roof on a projecting bay are uniquely extravagant within the districts architectural parameters, display the family's prominence and wealth. Likewise, the George Boardman Clark House at 6 South Fountain Street (NR listed 7/22/94) is a grand Queen Anne constructed for a prominent citizen. After serving as the State Auditor, Clark established the Malden and New Madrid Narrow Gauge Railroad, laying out the town of Malden and running the <u>Courier</u> newspaper in Cape Girardeau. Demonstrating his prominence when he became the first Vice President of the Cape Girardeau Building and Loan Association on Main Street, he had the large home constructed in 1882 in the

gable and wing form.²⁰ The structure has intricate ornamentation in the gables and a massive two-story porch that is not reflected on any of the other homes within the district.

Despite the prominence displayed by some of the districts well known inhabitants, the middle class residents found themselves in the simpler homes that were of good quality and constructed for practicality. An example of this is the Colonial Revival style American Foursquare house constructed at 300 Good Hope in 1906 for Robert Wichterich (NR listed 8/12/99). The pharmacist and physician had the home built the year before he opened his own drug store, which was probably located in the nearby German Haarig Commercial District at Sprigg and Good Hope.²¹ The house lacks the outstanding embellishments found on the Glenn and Clark houses, and instead features carved classical columns, dentiled cornice lines, and turn spindles on its first level porch. The more simple design reflects Wichterich's middle class status.

Architectural Forms and Styles

When the railroad entered the city it not only created a way for local businesses and farmers to send products across the country, it also brought new ideas, products, and people to the city. The nationalization of products also brought the standardization of materials, forms and designs for items. This nationalization was also seen in architecture, as house types and styles percolated across the country, resulting in national forms and designs utilizing local materials and mixing in vernacular and high style elements. The district buildings reflect the national house forms and designs popular at the time of their construction, with a wide variety of styles demonstrating the changing architectural motifs during the last few decades of the 19th century and the first half of the twentieth century.

<u>Forms</u>

As railroads expanded across the country, new materials could be incorporated into structures as they never had before. No longer relying on the resources in the immediate vicinity, houses began to take on more intricate plans, though still designed with some pre-railroad traditions. While many of these "National Folk" forms were adorned with applied materials and decorations that categorize them into specific styles, some buildings within the district lack a distinctive identification, and are therefore categorized by form.

Gable Front- The Gable Front homes in the district are primarily one-and-a-half stories tall with horizontal siding and simple cornices, and a front gabled roof. While adopted by the Greek Revival movement in the northeast, the Gable Front houses within the district have a simpler design that was prolific in the south between 1880 and 1930. Many of the buildings with this form were probably more high-style buildings, but have lost their applied architectural decoration and are left with the gable front as their primary defining feature. An example of the Gable Front

form is represented by the building at 12 North Middle Street (Photo 14). The structure is simple, one-and-a-half stories tall, with a front gabled roof, wood siding, and ornamentation limited to wood window pediments.²²

Gable & Wing- The Gable and Wing design consists of a front gabled house with a side or hipped roof gabled wing. Typically a shed roof porch is found at the junction of the two building portions. Many of these homes were constructed in phases, originally designed as a single block with a wing added later. The Gable and Wing buildings in the Courthouse-Seminary district were constructed all at once, as a single house type rather than a progressive design. Often, additional decoration was applied to give these buildings a hint of popular style. A two-story example of this form is found at 101 South Lorimier (Photo 9). The building has a two bay front gabled portion, with a hipped roof wing that extends to the east. A one story example of this form is found at 220 Merriwether (Photo 13). This building also features a two bay front gable but has a side gabled wing extended to the east. Both of these examples have applied ornamentation which further classifies them as a particular style as opposed to denotation by form.²³

Central Passage- A few of the older structures within the district have a simple Central Passage form, though they have received rear additions. These houses consist primarily of a two-room wide, one-room deep floor plan with a side gabled roof. Often a porch is added to the front of the building, though it can expand across the entire façade or rest just above the entrance. This house type remained common through the early twentieth century, but most of the examples found in the district date from the last decades of the 1800s. An excellent example of the Central Passage form is found at 24 South Lorimier (Photo 15). The five bay building has a central entrance with a side gabled roof. A small, hipped roof porch is found at the entrance. Chimneys are found in both gables, and a shed dormer is centered on the roof. ²⁴

I-House- The I-House is most simply described as two-rooms wide, one-room deep, and twostories tall with a side gabled roof. The I-House often received decorative applications to porches, windows, and doors that create a specific stylistic identity. The non-descript I-Houses in the district were constructed prior to 1900, and have very simple if any detailing.²⁵ An early example at 151 S. Spanish constructed in 1838. This side gabled, brick building is two stories tall, and five bays wide, with a central entrance. Another brick is example is found at 232 Good Hope, where an entrance porch has been removed, resulting in overall simplicity of design.

Pyramidal- The Pyramidal house became popular between 1905 and 1930, replacing the smaller Hall and Parlor or Central Passage and creating a new look for massed plan homes that typically were two rooms wide by two rooms deep, one story tall. While many homes in the district have the pyramidal roof design, only one (located at 10 South Lorimier and constructed

²²Virginia and Lee McAlester. <u>A Field Guide to American Houses.</u> (New York: Knopf, 1984), 90.

²⁵ Ibid, 96.

National Register of Historic Places Continuation Sheet

Section number <u>8</u> Page <u>51</u> Courthouse- Seminary Neighborhood Historic District Cape Girardeau County, MO

in 1890) lacks specific decoration for categorization under a style.²⁶

American Foursquare- The American Foursquare house is the two-story "subtype" of pyramidal home made popular in pattern books between 1905 and 1915. The building type consists of a square floor plan with a steeply pitched hipped roof or pyramidal roof, and occasionally featuring hipped dormers. The entrance is slightly off-center, and often covered by a full width porch. The foursquare design was easily modified by decorative application to give the form high style detailing.²⁷

Stack-House- The stack house is the two-story derivative of the Hall-and-Parlor house, consisting of a single room on each level, with a side gabled roof. Central Missouri descriptions of stack houses include tall profiles of at least two stories, some with a loft or attic above. Complications to the house form are typically minimal. Though pent roof entrance surrounds may be common, the form usually lacks front porches, one-story rear kitchen additions, and gable-positioned chimneys. The only example of a Stack House within the district is found at 14 North Fountain (Photo 16). This building has a rare example of a front porch, as well as a one-story kitchen addition. A half-story "loft" is found above the second level.²⁸

Two-Part Commercial Block- The two-part commercial block building is described as a commercial structure with two divisions that are noticeably separate and typically used for different functions. The lower, street level space is typically openly commercial, while the second or upper level spaces are used for more private activities, such as office space. These buildings can be decorated with applied ornamentation to classify them in almost any style. There are two examples of the form in the district, located at 221 Merriwether and 224 South Lorimier. Neither has applied ornamentation that would constitute a specific style. Rather, they are both brick structures with flat roofs, first level display windows, and second level metal hopper windows.²⁹

Like the stack-house, there are a few forms in the district that are only represented by one or two examples. The 1850 building found at 227 South Lorimier, is the only example of a Double Pen design. The form consists of two room, side-by-side, connected by an interior doorway. The side gabled roof, end chimneys, and two façade entrances are typical elements of this form.³⁰ Another of the rare forms found in the district is the German Cottage, which is found in brick at 323 Themis, and is executed in a frame design at 225 South Lorimier. Constructed by German immigrants, these buildings are local replications of forms used in Hanover and Bruenswick, Germany. At the turn-of-the-century, these buildings were found near the German Haarig district, and scattered in the older parts of town. Simple and compact in appearance, the

defining features include steeply pitched, side gabled roofs, arched windows, simple brick corbelled or paneled entablatures, and broken pediments on the gabled ends. Typically the buildings are one to one-and-a-half story full or quarter Georgian plans, with rear ells or additions. In some instances the entrances have sidelights.³¹ Another example is the Colonnaded Apartment building. The only example of this structure is found at 43 South Lorimier. The building was designed with large columns that rise from the first level to above the second floor, terminating at the roofline. These structures offered street facing porch space for tenants regardless of what level they lived on the building. Unfortunately, the district example has been significantly altered and is considered noncontributing.

<u>Styles</u>

Primarily constructed in the two decades before and after the turn-of-the-century, the stylistic designs within the district can be categorized into three groups: Late Victorian, Revival Styles, and turn-of-the-century American movements. Most of the buildings are national folk forms as described above, with decoration applied to windows, doors, and rooflines to imitate high style designs.

Late Victorian

Late Victorian houses were constructed across the United States in the last decades of the 19th century and first decades of the 20th century, loosely based on Medieval designs and mixed with some colonial designs. The Victorian buildings were some of the first to utilize balloon framing, allowing for more creative footprints than the rectangle or square. In addition, industrialization impacted the architectural world with new technologies that could not only mass produce decorative facing materials and basic façade items at a low cost, but also send them cross country by way of the expanding railroad lines. Though the new styles were unique at their inception, they quickly became prolific and somewhat uniform as towns across the country could share the same decorative elements such as verge boards, stained glass windows, carved doors, turned spindles, and elaborate window and door surrounds.³²

Queen Anne- Queen Anne houses are known for their asymmetrical facades that feature dominant front-facing gables, steeply pitched roofs of irregular shape, patterned shingles, cut-away bay windows, and full-width or wrap around porches. While many of the buildings in the district feature intricate spindlework of the Eastlake subtype, most of the Queen Anne style buildings in the district are Free Classic, meaning they use classical columns instead of turned spindle porch supports, as well as utilizing cornice line dentils and Palladian windows, similar to asymmetrical Classical Revival style homes. One of the most intact examples of a Queen Anne house can be found at 401 Themis Street (Photo 2). This Free Classic, wood sided, two-and-a-half story example has a steeply pitched front gable roof with a cross gable extending east. Fish

National Register of Historic Places Continuation Sheet

Section number <u>8</u> Page <u>53</u> Courthouse- Seminary Neighborhood Historic District Cape Girardeau County, MO

scale shingling surrounds a Palladian window in the front gable. A porch with a corner conical roof wraps from the north facade to the east elevation, terminating at a two story projected bay window, which also features fish scale shingling.³³

Shingle- Shingle style homes are categorized by their wall facing material, and can appear in many different forms and styles. Two of the Shingle style buildings in the district (101 South Lorimier and 313 Independence) represent the Gable and Wing form. The only other Shingle style building in the district is located at 227 South Spanish, found in the American Foursquare form. These buildings are categorized as Shingle style buildings because their upper levels are completely covered in wood shingles. In addition, the buildings are similar in their steeply sloped roofs, classical columns, and stone foundations.³⁴

Italianate- Only one building in the district is classified as "Italianate," though several buildings possess some of the style's decorative elements. The Italianate style is recognized for its low pitched roof, wide overhanging eaves, decorative brackets, and tall and narrow windows with elaborate crowns. The district's example includes all of these elements. The example found within the district is located at 301 South Lorimier. This structure has a low pitched roof with wide overhanging eaves supported by hand painted and carved wood brackets. Tall, narrow windows with bracketed stone sills emphasize the buildings verticality, reinforced by the smooth brick walls.³⁵

Revival Styles

Turning back to European design traditions, the turn-of-the-century was a time when homes featured materials and decorations that ornamented homes in the "old country." In Cape Girardeau, the revival styles dominated the architecture of the late 19th century. While distinctive styles are identified under the general category "Revival Styles," some of the buildings in the district have a mixture of decorative elements that could not be specifically identified, and were categorized as the general "Revival Style."³⁶

Colonial Revival-The most popular style found within the district is the Colonial Revival style, represented by eighteen examples, though most are muted and simple. The style is mostly identified by pedimented or exaggerated entries or entry porches, fanlight transom windows, sidelights, symmetrical facades, double hung and paired windows. While a mixture of these elements can be seen on the buildings in Cape Girardeau, the district's examples are usually simple square, two or two-and-a-half story buildings with hipped roofs, segmental arched brick lintels, full length porches with classical or simple column supports, and hipped or gabled dormers. These examples are sometimes referred to as the "Classical Box." An example of this type is found at 340 South Spanish (Photo 1). The building has a steeply pitched pyramidal roof with a full width porch and second level balustrade that feature classical columns and turned

Section number <u>8</u> Page <u>54</u> Courthouse- Seminary Neighborhood Historic District Cape Girardeau County, MO

spindles. The windows are ornamented by stone sills and segmental arched brick lintels. A hipped roof dormer is centered on the roof.³⁷

Late Gothic Revival- The only building in the district constructed in the Late Gothic Revival style is St. Vincent's Church. With its steeply pitched roof and cross gables, pointed-arch windows, conical finials and domed central tower, the building exquisitely demonstrates the style's defining features. However, the house at 220 Merriwether also possesses Gothic detailing, including a steeply pitched cross gable roof and gothic arched window in the gable.³⁸

Tudor Revival- Tudor Revival buildings are recognized by their steeply pitched, side gabled facades with dominant cross gables. Often half-timbering is present, with tall narrow windows found in groups with multi pane glazing, and massive chimneys. There are three subtypes found in Cape Girardeau: Stucco Walled, Brick Walled, and Stone Walled. Within the district, all the examples of Tudor Revival buildings have brick walls, and most have cross gabled projecting entrance bays. The 1935 Lorimier School building (Photo 18) and 1936 Knights of Columbus Hall (Photo 17) are larger, late examples of the style.³⁹

Turn of the Century American Movements

At the turn-of-the-century, styles that rejected the historically accurate designs of the revival styles. An early "modern movement" developed at this time, and was easily adopted in residential neighborhoods across the country. The two early modern styles found in the district are the Craftsman style and the Prairie style. Influenced by the Arts and Crafts movement, the Craftsman style house was featured in many magazines during the first decades of the 20th century, including *Western Architect, House Beautiful, and Good Housekeeping.* Due to the national publicity, pattern books and pre-cut packages were created to enable local laborers easy construction of the bungalow. Though the high-style interpretations are most recognized in California, simply designed one and one-and-a-half-story examples became the most popular and fashionable small house type in the country.⁴⁰

Craftsman- The Craftsman style is a rather prolific type in Cape Girardeau, found in abundance in the eastern portion of the city, and specifically along West End Boulevard. Within the district there are 15 examples. The Craftsman home typically features brick or stucco siding, though some examples are also frame. Additional elements of the style include a low-pitched, gabled roof with a wide overhanging eave and exposed rafters, and often decorative beams added under the gables. They commonly utilized low piers without columns. Most of the side gabled Craftsman houses have a centered shed or gabled dormer. The windows on bungalows are most often single sash, with multi-light and sometimes stained or decorative glazing in the upper portion. However, most of the examples within the district are double hung sash one-over-one windows. Windows and doors have simple, square surrounds, sometimes utilizing sidelights. An

excellent example of Cape Girardeau's Craftsman homes is the building at 429 Themis (Photo # 3). The structure is side gables with brick first level with a full width porch featuring square columns and piers. A front gabled dormer is centered on the roofline, featuring small brackets below a wide eave. The level windows are ten-over-one wide double hung sashes with segmental arched brick lintels and stone sills.⁴¹

Prairie- Two story homes with low pitched, hipped roofs, wide overhanging eaves, and first level porches with massive square porch supports typify the Prairie Style. There are several examples of Prairie style homes in Cape Girardeau, and those found in the district are two story brick buildings, typically with entry porches rather than full length porches. A melding of Colonial Revival and Prairie Style designs is also reflected in some of the designs. The district's examples of this style are of the American Foursquare form, simple in ornamentation and design. The district's examples of the Prairie style are best represented by the building at 220 South Spanish (Photo 8). This simple building features a hipped roof with wide overhanging eaves, and a first level entrance porch with square brick supports.⁴²

Modern Movement

Turning away from the historical interpretations of the past, and utilizing new building techniques and materials, Modern Movement buildings did not really explode across the country in residential architecture until after World War I. Even after the adoption of new materials into mainstream residential styles, the Great Depression hindered a full embrace of the Modern Movement across much of the country until after World War II. In Cape Girardeau, the early Modern Movement buildings from the 1920s to the 1940s are distractive in the city because they are so few. Art Modern and Art Deco structures are scattered, and more clearly represent infill rather than whole streets or neighborhoods. A second population surge in the 1950s and the coming of the Interstate in the 1970s resulted in construction booms of popular styles, identified as post modern but more accurately described as NeoColonial. Within the district, most of these buildings were constructed after the period of significance and are considered noncontributing resources. Some home owners remodeled their turn-of-the-century homes at this time, and the application of new materials and changes to the façade design gave the buildings a "Modern" look. However, a few of the buildings were constructed in early Modern Movement designs. utilizing Moderne or Art Deco elements and lines. While most of the contributing district examples cannot be specifically categorized, the apartment building at 2 North Fountain (Photo 10) executes the Art Deco style.⁴³

Art Deco- Art Deco buildings are recognized for their smooth wall surfaces, geometric motifs, towers an vertical projections, which often rise above the flat roofline, and ornamentation that includes zigzags or chevrons. The district's only example is a brick apartment building with Central projections that rise above the flat roofline and square stone used as ornamentation.⁴⁴

Vernacular Elements

The district reflects not only the high style and muted designs popular during the period of construction; it also reflects the cultural traditions of the residents that lived in the homes and the builders and architects that designed and built them. With a strong German heritage, as well as some French influence, the buildings reflect elements of the city's history in their decoration. One example is the use of corbelled brick cornices, which are often found on buildings in Missouri's German towns, such as Hermann. This particular element is found on many of the older brick structures, particularly the German Cottage at 323 Themis, but also on I-houses like 127 South Lorimier and the Double Pen at 227 South Lormier. A second observation of local design is that nearly every residential building in the district has a full width porch. While full length porches were popular on turn-of-the-century styles, the lack of homes with entrance porches or no porches at all reflects the southern and French influence within the city during the period. Full width porches were also a practical element, helping residents escape the muggy summer weather.

The district continues to reflect the turn-of-the-century community and construction boom associated with the coming of the railroad, and the houses demonstrate the forms, styles, and designs of middle and upper class homes reconstructed in the original residential neighborhoods. The district also reflects the transition to automotive transportation, as driveways, garages, and automotive services were constructed and streets were widened. The buildings are in good to excellent condition, and current preservation and restoration activities are reinvigorating the district.

Verbal Boundary Description

The Courthouse-Seminary District is roughly bounded by Themis Street on the north, Main and Aquamsi Streets on the east, Morgan Oak Street on the south, and Middle Street on the west. The boundary includes all of the buildings that front to Lorimier Street between Themis and Good Hope Streets, and everything east of Lorimier between Merriwether and Morgan Oak Streets. Buildings in the 200, 300 and 400 blocks of Independence, Merriwether, and Themis Streets have been included, as well as the buildings that front to North Fountain and Middle Streets between Themis and Independence (the boundaries are also shown on the attached scale map of the district).

Verbal Boundary Justification

The selected boundaries incorporate the largest concentration of contributing properties in the residential neighborhood in the southern part of the original town. While other residential resources from the period of significance exist to the west of the chosen boundaries, these resources are disconnected from the district by a large number of empty lots, modern construction, or commercial structures. The large property of the National Register Listed St. Vincent's Seminary and the interstate highway separate the district from the residential neighborhoods to the south. The historic downtown commercial area creates the northern boundary.
