30. been found, which suggests that they were never considered ornamental; but, like most of the park restoration work done by the Exposition Company, were primarily utilitarian. The Exposition Company saved its available funds for the World's Fair Pavilion and the Jefferson Memorial, its most notable contributions to the restored park. Indeed, the low-lying positions and deep support structures of these bridges make their balustrades their only readily visible components. In 1936, it was reported that these 3 bridges were in need of major repairs; and in 1939-1940, their wooden decks were replaced with reinforced concrete. It is possible that the present balustrades date from that time.

30. HISTORY AND SIGNIFICANCE The first bridges in Forest Park were "wholly of wood and rustic in design." The Franklin Bridge was destroyed by the flood of April 1, 1897, and was rebuilt by 1899. Wells Drive was then part of the Grand Drive carriage circuit; and the new bridge, located on a curve where it could easily be seen, was given what the Park Commissioner called an "ornamental and picturesque structure." Although constructed of concrete, the bridge had a dark red-brown color and a Beaux-Arts design with classical moldings, vase-shaped balusters, and (see p. 2)		29. OTHER SURVEYS IN WHICH INCLUDED		6. OTHER NAME(S) Wells Drive Bridge
31. DESCRIPTION OF ENVIRONMENT Since the actual course of the River Des Peres has been diverted through culverts, the level of the water in the old channel has been raised substantially, submerging about half the height of the arch. The old channel curves sharply at this point, creating one of the more picturesque corners of the park. Wells Drive gives access to Steinberg Skating (see p. 2)		32. SOURCES OF INFORMATION Forest Park Board of Commissioners 1875 Report, p. 21. Annual Report of the Park Commissioner, 1896-97; 1899-1900 (photo) 1900-1901. (see p. 2)

15. NAME OF ESTABLISHED DISTRICT		HEIGHT: 12'		
30. HISTORY AND SIGNIFICANCE When Forest Park opened in 1876, its bridges were "wholly of wood and rustic in design." The Lafayette Bridge, the first one on the park approach from Union Avenue and one of the most frequently used, was rebuilt in 1883. (The first surviving Annual Report dates from 1892.) It was frequently photographed as a symbol of the park. In 1935, however, the bridge appeared to be weakened; and, beginning in September of that year, the center span was replaced by the Superintendent of Construction, using designs prepared by the (see p. 2)				
31. DESCRIPTION OF ENVIRONMENT Since the River Des Peres has been diverted into culverts, the water in its old channel has been substantially raised, destroying the illusion of height the bridge once gave. The originally-sought effect of picturesque nature has also been replaced by smooth lawns, with shrubs and low-lying plants totally eliminated. Lying near the Union Boulevard (see p. 2)

30. HISTORY AND SIGNIFICANCE A bridge was first constructed near this point in 1892 when a new park stable was constructed nearby. It was replaced by the Louisiana Purchase Exposition Company after the 1904 World's Fair. Both were wooden. Theatre Drive was constructed in 1922 to facilitate access to the Municipal Opera, which had opened in 1919. The present bridge "of modern design" was erected in connection with this road and was illustrated in the Annual Report of 1923. Its yellow color and arched balustrade were apparently intended to harmonize with the other (see p. 2)		25. ORIGINAL SITE? yes MOVED? WHEN MOVED?		SECTION
31. DESCRIPTION OF ENVIRONMENT The water level in the old River Des Peres channel under the bridge is considerably higher than it was at the time of construction. The bank southeast of the bridge is occupied by a parking lot, and other roads and paths are laid out in such a way that a clear view of the span is not readily obtainable. Because of its proximity to the Municipal Opera, however, (see p. 2)		26. LEGAL LOAD CONDITION
