Description			
<p>This limestone rubble masonry church consists of a large one-story front-gabled sanctuary with a four-story squared corner bell tower. The sanctuary has a parapeted gable framing a large traceried pointed-arch window. This sits above a shed-roofed narthex with three pointed-arch portals with pairs of historic wooden doors set within layered arches; the largest is at center beneath a cross gable. The bell tower has stepped corner buttresses and narrow, deep-set windows below a crenellated parapet. Gabled side entrances and wall buttressed frame pointed-arch windows along the side facades. The adjacent rectory faces Clarence and is connected to the church by a covered walkway lined with arcades. The rectory, also of limestone rubble masonry, stands two bays wide with a side-gabled roof. The left bay has a two-story three-sided cant bay, with smooth limestone enframements encasing the three windows on each story. There is a small parapeted cross gable over the right bay; on the first story, an entrance with a historic wood- and vision-paneled door is set within an elliptical-arched limestone surround. This is framed by paired windows with thick limestone lintels. In the second story right bay, there are three paired windows of varying sizes.</p>

Description This variegated brick building stands two stories tall and three bays wide on a raised basement. It is flat-roofed, with an overhanging side-gabled false roof and a central cross-gable. All gables have vergeboards, and all windows have brick sills and soldier course headers with a square limestone keystones. The center bay has a square-headed entrance at the ground level, sheltered by a flared segmental arch hood-mold over brick corbels. Above this, a single window sits between the first and second stories. The left and right bays have paired windows in the first and second stories. Most of these are boarded-over, but the first story right bay window retains at least one three-paned upper sash.

Description This dark brown brick building stands two stories tall and three bays wide. It is flat-roofed with a shaped front parapet capped in terra cotta with raised end blocks and a stepped center block. All window and door openings have brick sills and soldier course headers with square limestone keystones. The center bay has a raised open porch (painted; constructed in either limestone or concrete block) serving four closely-spaced entrances. The second story has two wood and vision-paneled doors (the right of which is likely original) leading to a wide concrete and cast iron porch with scrolled cast iron brackets and balustrade. An inlaid brick and limestone pattern sits between these doors at the center of the façade. The left and right first and second story bays have paired 1/1 windows; these, along with the balcony, have modern metal awnings.

Description	<p>This variegated brick building stands two stories tall and three bays wide on a raised basement. It is flat-roofed, with an overhanging side-gabled false roof with a central cross-gable. All gables have vergeboards, and the false roof is tiled in red terra cotta. Random ashlar limestone covers the façade up to the first story sill line in the left and right bays and extends upwards over the entrance in the center bay. The entrance has sidelights and sits at ground level, below a single 1/1 window with a limestone lug sill and a soldier course header which sits between the first and second stories. The left and right bays have tripartite windows in the first and second stories, each of which is comprised of a large square picture window flanked by narrow fixed 1/1 windows. The first story windows have limestone lug sills and soldier course headers, and the second story windows have limestone lug sills over inlaid limestone blocks simulating brackets. A soldier course with inlaid limestone blocks runs below the second story lintel line. This variegated brick building stands two stories tall and three bays wide on a raised basement. <p>Description</p> <p>This variegated brick apartment building stands three stories tall and ten bays wide. It is flat-roofed, with a shaped front parapet capped in limestone rising in stepped sections over the center two bays, the third bay, and the eighth bay. The façade is delineated by soldier courses, limestone blocks, and diamond-shaped brick and limestone inlays. The second, fourth, seventh, and ninth bays have concrete balconies at each story with cast iron balustrades and scrolled cast iron brackets; each has a transomed door framed by original multi-paned sidelights, and the third-story balconies have modern metal awnings. The third and eighth bays have first story entrances with limestone enframements and original multi-paned sidelights; the second and third stories each have single 1/1 windows with limestone enframements. All remaining bays have single 1/1 windows with limestone lug sills and soldier course lintels.</p>

Description This asymmetrical, cross-gabled red brick church stands two stories tall on a raised basement. It has limestone ornamentation and enframements, Tudor-arched windows with ogee arch traceries, hood moldings, stained glass windows, and crenellated parapets. The main façade is four bays wide. It is dominated by a crenellated three-story bell tower with stepped corner buttresses in the leftmost bay, and a large parapeted gable behind a wide one and one-half story crenellated bow and a two-story crenellated tower in the center two bays. Both towers hold raised entrances accessed by steep stairways. All windows feature original stained glass panels.

Description			
<p>This flat-roofed brick building stands two stories tall and two bays wide. It has a shaped front parapet with raised center and end blocks capped in terra cotta coping, and a wide protruding cornice over wooden modillions. A raised, flat-roofed entrance porch occupies the first story right bay, with squared brick piers and a solid brick bulkhead sheltering a single doorway with sidelights. The left first story bay contains one wide 1/1 window with a limestone lug sill and brick label mold. The left second story bay has one wide 1/1 window with a limestone lug sill. The right second story bay contains an original wood and vision paneled transomed door leading to the porch roof, which doubles as a balcony with cast iron balustrade. A brick header course runs at the second story lintel line.</p>

Description			
<p>This red and brown brick building stands two stories tall and two bays wide with a flat roof. It has a shaped front parapet capped in terra cotta with raised center and end blocks. A limestone course runs at the first story sill line. All windows are square-headed with soldier course headers. Two stretcher courses support a simple terra cotta cornice. The right first story bay has a raised porch with a low-pitched hipped roof over a single entrance with sidelights and transom which retains its original wood framing. The porch has squared brick piers with Corinthian capitals, a solid brick bulkhead capped in limestone, and molded wooden entablature. A single 1/1 window occupies the first story left bay, and single 1/1 windows with limestone lug sills are in the left and right second story bays.</p>

Description	<p>This two story red brick building stands two bays wide with a flat roof. It has a flared, steeply-pitched hipped false roof with large carved brackets and modillions. The right first story bay features a raised flat-roofed entrance porch over two transomed entrances, both which retain their original wood and vision panel doors. The porch retains its original molded wooden entablature, but has a modern wooden base, balustrade, and supports. A transomed door overlooks the porch roof, which doubles as a balcony with a modern wooden balustrade, in the second story right bay. The left first story bay has two 1/1 windows, each with limestone lug sills and lintels. The left second story bay has two 1/1 windows with limestone lug sills beneath a header course at the lintel line.</p>

Description This flat-roofed red brick building stands two stories tall and two bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with raised end blocks and a peaked raised center block over a large overhanging modillion cornice. A raised, flat-roofed porch occupies the right first story bay over two transomed entrances; it has squared brick corner piers, a solid brick bulkhead capped in limestone, and a dentillated wooden entablature. The left first story bay has a wide contemporary replacement picture window with a limestone lug sill and brick label mold, and the left second story bay has a contemporary replacement picture window with a limestone lug sill under a header course at the lintel line. A boxed bay faced in contemporary siding with a small 1/1 window occupies the right second story bay (this may have originally featured a door leading to the porch roof).

Description			
<p>This flat-roofed red and brown brick building stands two stories tall and two bays wide on a raised basement. It has a hipped false roof with overhanging eaves emerging from a flat front parapet framed by shallow side parapets. A raised, hipped-roof porch occupies the first story right bay over two transomed entrances; it has squared brick corner piers with raised cross-shaped inlays, a solid brick bulkhead capped in limestone, and a molded wooden entablature. All windows are contemporary vinyl replacements with soldier course headers. A first story limestone sill course runs under two 1/1 windows in the first story left bay. There are two 1/1 windows with limestone lug sills in the second story left bay, and there is a single 1/1 window with a limestone lug sill in the second story right bay.</p>

Description This flat-roofed red brick building stands two stories tall and two bays wide on a raised basement. It has a flat front parapet capped in terra cotta with limestone block and white enameled brick inlays. A molded terra cotta cornice runs over shallow brick corbels. A raised, flat-roofed porch occupies the first story right bay over two transomed entrances; it has squared brick corner piers, a bracketed brick entablature, and a solid brick bulkhead capped in limestone. Two 6/1 windows are in the left first story bay, framed by a limestone sill course and a soldier course with limestone block inlays at the lintel line. There are two 6/1 windows with limestone lug sills and soldier course lintels with limestone end blocks in the second story left bay. The second story right bay has a transomed contemporary replacement door leading to the porch roof, which forms a balcony with low brick columns capped in limestone framing a metal balustrade.

<p>Description</p> <p>This flat-roofed red and buff brick building stands two stories tall and two bays wide on a raised basement. It has a flared shed false roof with overhanging eaves and modillions framed by stepped side parapets capped in pressed copper molding. A raised, hipped-roof porch occupies the first story right bay over two transomed entrances; it has bracketed and squared brick corner piers on limestone plinths, a solid brick bulkhead capped in limestone, and a shaped wooden entablature. All windows are contemporary replacements with soldier course lintels. There are two 1/1 windows over a limestone sill course in the first story left bay, and two 1/1 windows with limestone lug sills in the second story left bay. A single 1/1 window with limestone lug sill occupies the second story right bay.</p>

Description	<p>This flat-roofed orange brick building stands two stories tall and four bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with low raised end blocks and a stepped raised center block decorated with a green enameled brick inlay pattern. A thick brick corbel course overhangs the façade at the cornice line. A raised flat-roofed porch occupies the center two first story bays over two pairs of transomed entrances with historic wood- and vision-paneled doors and wooden surrounds. The porch has bracketed and squared corner piers, two sets of stairs, a solid brick bulkhead capped in limestone, and a bracketed wooden entablature. All windows have historic 6/1 wooden sashes and limestone lug sills. The outer bays have two windows on each story; the first story windows have soldier course headers, and a soldier course runs at the second story lintel line. The two center second story bays have historic wood- and vision-paneled doors with 4-light transoms; these lead to the porch roof, which forms a balcony with low brick columns capped in limestone framing a metal balustrade. Green enameled brick inlays adorn the second story between the center and outer bays.</p>

Description	<p>This flat-roofed brown brick building stands two stories tall and four bays wide on a raised basement. It has a shaped front parapet capped in terracotta with a stepped, raised center block. A raised, flat-roofed porch shelters the center two first story bays over four transomed entrances with wooden surrounds and historic wood- and vision-paneled doors. It has squared brick piers, brackets, a wooden entablature, and a solid brick bulkhead capped in limestone. All windows have historic 6/1 wooden sashes and limestone lug sills. The leftmost and rightmost first story bays each have two windows with soldier course headers. A soldier course runs at the second story lintel line over two windows in both the leftmost and rightmost bays. There are two historic wood- and vision -paneled doors in the center two second story bays which lead to the porch roof, which forms a balcony with a metal balustrade framed by brick piers capped in limestone. The doors have three-paned transoms. Green enameled brick patterns adorn the front parapet and the second story.</p>

Description	<p>This flat-roofed brick building stands two stories tall and four bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with wide raised end blocks over the outer bays. Heavily patterned raised brick courses outline the outer bays, and raised brick ornamentation forms a chain pattern at the cornice line. The two leftmost first story bays are comprised by a cast iron storefront with a chamfered corner and cast iron corner column; the wide commercial bays have been paneled and subdivided to form smaller windows. The innermost right first story bay has a raised, hipped-roof porch over two transomed entrances with historic wood and glass paneled doors and a molded wooden surround. The porch has squared brick corner piers, an arched wooden entablature, and a metal balustrade. All windows are square-headed with historic 3/1 and 4/1 wooden sashes. There is a single window in the first story rightmost bay over a limestone sill course. There are single windows in each second story bay, all with soldier course lintels and limestone lug sills with brick brackets. A header course runs at the lintel line between each window.</p>

Description			
<p>This flat-roofed brick building stands two stories tall and three bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with wide raised end blocks over the outer bays. Heavily patterned raised brick courses outline the outer bays, and raised brick ornamentation forms a chain pattern at the cornice line. The center first story bay has an open brick porch with two flights of steps framed by squared brick half piers, all giving access to two pairs of raised entrances (this configuration results from the removal of a hipped-roof porch structure with brick corner piers). All windows are square-headed, and there are single contemporary replacement windows in the first story left and right bays over a limestone sill course. There are single windows (all boarded) in the second story left and right bays, and there are two smaller windows in the second story center bay; all have soldier course lintels and limestone lug sills with brick brackets, and a header course runs at the lintel line between each window.</p>

<p>Description</p> <p>This brick Craftsman-style home takes advantage of its corner site with a full width brick porch which wraps around to the right elevation. The porch is screened in above its low walls, obscuring door and window details of the first story. The house is front gabled, with a secondary gable slightly projecting at the right, more than half the width of the façade. This secondary gable has a stucco face; a set of four wood 6/1 windows rest on an applied wood embellishment which imitates elaborate timber construction. Both gables have wide vergeboards with cut out ends; the lower gable's eaves rest on three over-scaled brackets. The house's stone foundation is visible at side elevations.</p>

Description	<p>This side gabled 2-story brick Craftsman house has a full-width brick porch with a shed roof. At the first story, the front door is at the left bay, obscured by a heavy security storm door. A small side window is to its left. To the right is a set of four 1/1 windows under original 10-light transoms. The porch has exposed notched rafter tails. The second story of the façade is finished with stucco. The right bay projects slightly under a cross gable; brick rectangles are formed to either side of the three 1/1 wood windows. The gable end is finished with imitation half-timber, and its eaves are supported by three brackets. The left bay of the second story has a wider 1/1 window. All windows at the façade are on stone lug sills, and a limestone foundation is visible at side elevations.</p>

<p>Description</p> <p>This front gabled house has a light brown brick first story and a stuccoed second story. The porch is full-width but is only covered at the left half of the façade, where a shallow-pitched shed roof is supported on two wide brick piers. The two sides of the porch roof have stepped brick parapet walls (a very unusual feature), and the front eaves are supported on two large wood brackets. The front door (a non-historic replacement) retains its transom light. To the right, a triple set of 1/1 windows has a stone sill and art glass transoms under a soldier brick header. The second story features a centered projecting box bay. A ribbon of four 1/1 windows is recessed in the box bay; three decorated purlin ends project above and between the windows, visually supporting the stucco cove. There is a shallow balcony with metal railing in front of the box bay; to either side is a small diamond-paned window under an arched wood header. The front eaves are supported on four wood brackets. The shaped vergeboards have notched ends and flare out where they meet at the peak to form an interior arch. Side elevations are red brick with a limestone foundation. The only notable alteration is the addition of imitation stone veneer over the two short piers at the base of the porch steps, right.</p>

Description			
<p>This side-gabled house has a light brown brick façade. The brick front porch is full-width and has a shed roof, which is supported on three wide brick piers which have narrower painted (probably wood) blocks in lieu of capitals. Steps are at the left bay of the porch; at the right bay the porch wall is broken by an inset railing (now a dimensional lumber replacement) on a thick stone sill. The front door at the left bay has a small 6-light side window. At the right side of the first story, two 1/1 windows flank a double-width fixed pane; four leaded glass transom lights top the window set. The second story is dominated by a cross gable at the right side of the façade; it features a projecting three-sided bay window with replacement windows, supported on two wrapped brackets. The front of the bay is covered with modern horizontal siding, and it lacks front eaves (likely a non-historic alteration). The left side of the second story under the house's main eaves has no window. Side elevations are red brick with a limestone foundation.</p>

<p>Description</p> <p>This Craftsman-inspired house has a red brick façade and a shallow-pitched side gabled roof. The brick front porch is full width, but only the left side of the porch is covered. Here, two brick piers support a gable roof. Wood brackets are paired at the top of the piers. The front door retains its numbered transom light. At the right bay, a set of four double hung windows with leaded upper sashes share a common arched opening. At the second story are three wood 8/1 windows on stone sills; the left and right windows have inset red square tiles underneath. There is a parged section under the center window; projecting bricks underneath suggest that there could have been a window box or other projecting embellishment here at one time. The center section of the roof pops up slightly to create, in essence, a wall dormer of only five courses. Thin rafter tails support the open front eaves. The limestone foundation is visible at the side elevations.</p>

Description			
<p>This Craftsman style house has a front gabled roof. The red brick façade features a centered shed-roofed brick porch which is close to full width. The three brick porch piers pierce the roof and are capped or parge just a few courses above the shed roofline. The front door is at the left side of the porch; at the right is a set of four windows (apparently casements) with individual transoms. The portion of the second story directly above the front porch is stuccoed and projects slightly from the narrow expanse of brick wall to either side. There are six windows; the outer two are narrower and appear to be original while the center four appear to be 8/8 vinyl replacements. The brackets that separate the window and support the overhang above are similar to the brackets on the porch piers. Imitation half timbering is above and below the windows. The front eaves have pierced and shaped vergeboards. The side elevations are red brick with stone foundations, and there is a low shed-roofed wall dormer with a single window at both sides.</p>

Description This side-gabled house has a light brown brick façade. The brick front porch is almost full-width and has a shed roof which flows around the two brick piers which support it. The front door, a modern replacement, is at the left bay. At the first story's right bay is a set of four narrow replacement windows. Above the front porch there is a wide gabled wall dormer with four windows under a pair of metal awnings. The gable end is supported on five wood brackets. The open eaves of the main roof are supported on rafter tails. The side elevations are red brick with stone foundations.

<p>Description</p> <p>This front gabled house has a variegated red brick façade. The porch is full-width but is only covered at the left half of the façade, where a shallow-pitched hipped roof is supported on two wide brick piers. The porch eaves are supported on scalloped rafter tails. There is a small hall window to the left of the front door. At the right side of the façade, a pair of wide 1/1 replacement windows shares a single wide opening and a stone sill. At the second story the only fenestration consists of two 1/1 replacement windows near the center of the façade. At both stories the stone sills interrupting a rowlock brick course; at the second story, six columns of stacked headers spaced across the façade provide a visual reference to half timbering; imitation half timbering of wood and stucco fills in the gable end above the second story windows. The open front eaves are finished with flared vergeboards with intermittent applied bulls eyes (some missing) and notched ends. The side elevations are red brick with stone foundations.</p>

<p>Description</p> <p>This front gabled house has a dark red-brown brick façade. The porch is full-width but is only covered at the left half of the façade, where a shed roof is supported on two wide brick piers. The porch front eaves are supported on exposed rafter tails. There is a high narrow 6-light window to either side of the full-light front door. At the right side of the façade, three 1/1 replacement windows and their diamond-paned original transoms share a wide arched opening. The center section of the second story is filled in with modern horizontal siding around three replacement (?) windows in what appears to be the original wood surround. These windows consist of a wide 8/1 window flanked by narrower 6/6 windows. They are separated from the stick and stucco in the upper gable end by a wood course with descending pendants. The closed eaves of the gable roof are finished with shaped vergeboards that crop a pendant at the peak. The side elevations are red brick with stone foundations.</p>

Description This side-gabled house has a light brown brick façade. The porch is full-width but is only covered at the left half of the façade, where a shallow-pitched shed roof is supported on two wide brick piers. The two sides of the porch roof have stepped brick and stucco parapet walls (a very unusual feature). This left side of the porch appears to have been enclosed during the period of significance, but the slider windows across the front are a contemporary replacement. To the right, original windows have been replaced by a single picture window on the original stone sill. Centered at the second story is a wide gabled wall dormer with a stuccoed front; it has a scalloped stepped (Flemish or Mission-style) parapet wall. The four 1/1 windows are partially obscured by a metal awning. Wood quatrefoil designs are applied under the windows and in the gable end. The side elevations are red brick.

Description This front gabled house has a red-brown brick façade. The brick porch is full-width with a shed roof supported on three brick piers. The transomed multi-light door at the left bay retains its transom. At the right side of the porch, a set of three windows or window pairs are obscured behind storm units; the transom lights appear to be intact. The center section of the second story is filled in with modern horizontal siding around four 1/1 vinyl replacement windows. The side elevations are red brick with stone foundations. At the porch rail (left), porch piers and at either side of the second story, red diamonds (tile or stucco) are used as a design element; at the second story these are contrasted with darker brick at slightly projecting corbelled out pilaster-like elements at either end of the façade. The side elevations are red brick with stone foundations.

Description	<p>This two-family building is two stories and has two façade bays. The exterior is dark red-brown brick. The brick porch at the left bay has a flat roof which forms a second story balcony. The two front doors in the left bay are replacements with transoms. At the second story left bay balcony, original narrow French doors appear to be intact behind a modern storm door. At both stories of the right bay there are two 3/1 wood windows. A raised brick label molding outlines the two first story windows. Above the second story, an applied triangular pediment (part of the front parapet design) is open, designed with the brick wall filling the pediment area; the original brackets and modillions decorating its eaves are intact. Five vertical braces (apparently pipe) run from the lower eave into the gable end, presumably supporting the upper eaves. The original parapet wall and coping are visible to either side of the gable. The limestone foundation is visible at side elevations. At the basement level of the right bay there are two fixed windows.</p>

<p>Description</p> <p>This two-family building is two stories and has two façade bays. The exterior is dark red brick. The brick porch at the left bay has a flat roof which forms a second story balcony. The two front doors (left bay) are replacements with transoms. At the second story balcony, original narrow French doors appear to be intact behind a modern storm door. At both stories of the right bay there are two 3/1 wood windows. A raised brick label molding outlines the two first story windows. Although the main roof is flat, it is fronted by a shallow side gabled false roof which has two wood brackets, open eaves, and exposed rafter tails directly above the second story windows. The limestone foundation is visible at side elevations.</p>

Description This flat-roofed brown brick building stands two stories tall and two bays wide on a raised basement. It has a hipped false roof with overhanging eaves in front of a flat front parapet with raised end blocks. A raised, flat-roofed porch with squared brick piers occupies the right first story bay over two transomed entrances and connects to an open porch in the left bay; they share a solid brick bulkhead capped in limestone. The first and second story left bays have 1/1 tripartite windows with limestone lug sills. The second story right bay has a transomed door framed by high 1/1 windows with limestone lug sills; this leads to the porch roof, which forms a balcony with a metal balustrade framed by brick piers capped in limestone.

Description			
<p>This simple front-gabled brick church has three façade bays. The double front doors (not original) are in a projecting gabled entry at a concrete stoop ten steps above grade; the stoop is finished with imitation stone veneer painted white. Above the doors is the church's sign and a slightly recessed lancet arched panel, possibly a former window. To either side of the entry the wall features a single replacement 1/1 window. A glass block basement window is set below these at the cast stone foundation. A circular louvered vent is in the gable end. A stepped corbel pattern supports the narrow eaves at the vestibule and main eaves. The façade is painted red. The side elevations are five bays; each bay consists of a single 1/1 window in a segmental arched opening at the auditorium and a glass block basement light below. The bays are separated by raised pillars or buttresses only a wythe out from the walls. The side elevations are not painted.</p>

Description This flat-roofed brown brick building stands two stories tall and two bays wide on a raised basement. It has a bracketed flared shed false roof framed by stepped side parapets capped in pressed metal molding. A raised, shed-roofed porch occupies the right first story bay over an entrance; it has squared brick corner piers, a solid brick bulkhead, and a wooden entablature with modillions. There are paired, square-headed historic 2/1 wooden windows with limestone lug sills in the left first and second story bays and in the second story right bay. At the basement level of the left bay is a single wide fixed window.

Description This flat-roofed brown brick building stands two stories tall and two bays wide on a raised basement. It has a bracketed flared shed false roof framed by stepped side parapets capped in terra cotta coping. A raised, flat-roofed porch occupies the right first story bay over two transomed entrances; it has squared brick corner piers with white enameled brick inlays, a solid brick bulkhead capped in limestone, and a dentilled wooden entablature. There are single 3/1 windows with limestone lug sills in the left first and second story bays; they have soldier course lintels with white enameled brick keystones. The second story right bay has a three-sided cant bay window with historic wooden paneling. It has historic 2/1 wooden windows framing a historic wood- and vision-paneled door with a historic 4-light transom that leads to the porch roof, which forms a balcony with a metal balustrade. At the basement level of the left bay is a paired fixed window with a soldier course lintel and white enameled brick keystone.

<p>Description</p> <p>This front gabled house is a later example of the local "Gingerbread" type. The façade is variegated brick. The front door is at a stoop in the right bay. Here, a steeper-pitched and asymmetrical second gable projects slightly and is separated from the rest of the façade by a tall front chimney. The door has a cast concrete surround and a metal awning. At the left bay a tripartite window is obscured under a metal awning; another small window is in the gable end with a similar awning. Both openings have brick sills and soldier headers.</p>

<p>Description</p> <p>This red and blonde brick building stands two stories tall and two bays wide on a raised basement. The first story left bay has a pair of transomed entrances. Over these is the ghost of a porch roof which would have formed a balcony accessed by a door with a segmental arch soldier course lintel in the second story left bay, and the cast iron porch supports and metal balustrade are still present. The first and second story right bays each have a 1/1 window with wooden surrounds and segmental arched soldier course lintels and lug sills. At the basement level of the right bay is a small paired window with a segmental arch soldier course lintel comprised of alternating red and blonde bricks. There is a sill string course on the first story, above which the brick facing is red and below which the brick facing is blonde. The building's roof is flat with a flat parapet capped in pressed metal over a corbeled brick cornice. The parapet's narrow end blocks project from the wall plane and are corbeled at the bottom.</p>

Description			
<p>This section 235 house has a brick-veneered first story with a front door at the left and a pair of new vinyl windows at the right. The second story overhangs the first. It is clad with modern horizontal siding and has two new vinyl windows. The roof is front gabled. The side elevations are the same material as the second story. This flat-roofed dark brick building stands two stories tall and two bays wide on a raised basement. It has an overhanging shaped front parapet capped in terra cotta with raised center and end blocks over a brick corbel course. There is a raised, one-story full-width porch with squared brick corner piers and a solid brick bulkhead capped in limestone. The porch has a front-gabled roof with overhanging eaves, exposed rafter tails, brackets, a shaped and bracketed wooden entablature with dentils, and timbering. The right first story bay has a transomed entrance with sidelights and the left bay has a paired window with limestone lug sill. The second story right and left bays have paired windows with limestone lug sills and metal awnings.</p>

Description	<p>This variegated brick building stands two stories tall and two bays wide on a raised basement. It is flat-roofed with an overhanging shed false front roof tiled in red terra cotta over carved brackets and exposed rafter tails. The false roof also features a small central gabled dormer tiled in red terra cotta that includes a small horizontal window with six lights. A limestone course runs across both bays at the first story sill line, and a brick soldier course runs across both bays at the second story lintel line. A raised flat-roofed porch occupies the right first story bay. It has squared brick piers with squared limestone capitals, a solid brick bulkhead capped with limestone, carved brackets, and wooden entablature. The porch shelters two transomed entrances. The left first story bay has a boarded opening of the same dimensions as a set of paired 12/1 windows with a limestone lug sill on the left second story bay. The right second story bay has a transomed door flanked by 9/1 windows that leads to the porch roof, which forms a balcony. The balcony includes squared brick half piers capped with limestone and a cast iron balustrade. At the basement level of the left bay there are two small square windows.</p>

<p>Description</p> <p>This front gabled red brick building stands one and one-half stories tall and two bays wide. It has decorative vergeboards and carved wooden brackets beneath the roof line, and all windows retain their original 9/1 wooden sashes. The right first story bay has a raised front gabled porch with a wooden base and squared brick piers. It has decorative vergeboards and carved wooden brackets, a decorated wooden balustrade with pierced balusters, and its gable front has decorative timbering. The entrance retains its original transomed wooden door and a high window with lug sill. The left first story bay has a paired window with a limestone lug sill and soldier course lintel. The upper story has a ribbon of three windows and the rest of the upper façade has been covered in aluminum siding; this likely covers stucco and brickwork seen on its neighbor at 4122 Kossuth and can be removed. At the basement level of the left bay there are two small fixed windows.</p>

Description	<p>This symmetrical variegated brick building stands two stories tall and three bays wide on a raised basement. It has a flat roof with a shaped front parapet capped in terra cotta coping with raised end blocks and a stepped center block. It has a raised flat-roofed porch sheltering four closely spaced entrances in the center bay. The porch has a solid brick bulkhead capped in limestone, squared brick piers, carved brackets, and a carved wooden entablature. The entablature and a single bracket are absent from the right half of the porch. The leftmost and rightmost bays on the first story each have two 1/1 windows with limestone lug sills. The central second story bay has two transomed entrances leading to the porch roof, which forms a balcony. The balcony has squared half piers capped in limestone, with decorative stone urns topping the corner piers, and a cast iron balustrade. The leftmost and rightmost bays of the second story each include two 1/1 windows with limestone lug sills. All of the openings on the second story have soldier course headers of green enameled brick matching a course of decorative inlaid patterning in green enameled brick between the second story and the parapet. The leftmost and rightmost bays of the basement level each have two small boarded over windows.</p>

<p>Description</p> <p>This front gabled red brick building stands one and one-half stories tall and two bays wide. It has wide vergeboards and carved wooden brackets beneath the roof line, and all windows save one retain their original 6/1 and 4/1 wooden sashes. The right first story bay has a raised front gabled porch with decorative vergeboards and carved wooden brackets, decorative timbering, squared brick piers, and a solid brick bulkhead capped in limestone. It shelters a transomed wooden door with a large vision panel and a high window with lug sill. The left first story bay has a tripartite window with original sashes, a shaped limestone lug sill, and soldier course lintel. The upper story has a tripartite window with original sashes over a shaped limestone sill course. It is surrounded by brick and stucco pattern work which emulates half-timbering. At the basement level of the left bay there are two small fixed windows.</p>

<p>Description</p> <p>This front gabled red brick building stands one and one-half stories tall and two bays wide. It has wide vergeboards and carved wooden brackets beneath the roof line, and all windows save one retain their original 4/1 and 3/1 vertical wooden sashes. A raised one-story full-width porch has a low-sloping hipped roof, squared brick piers, and a solid brick bulkhead capped in limestone. Decorative wooden brackets of varying size and style adorn its moulded entablature. Beneath the porch, in the right first story bay, are a transomed entrance and a high window with limestone lug sill. A pair of windows with 3/1 sashes and a limestone lug sill occupy the left first story bay. On the upper story, a ribbon of three windows with 4/1 sashes is surrounded by wood and stucco false half timbering.</p>

Description	<p>This symmetrical variegated brick building stands two stories tall and three bays wide on a raised basement. It has a flat roof with a shaped front parapet capped in terra cotta coping with raised end blocks and a stepped center block. It has a raised flat-roofed porch sheltering four closely spaced entrances in the center bay. The porch has a solid brick bulkhead capped in limestone, squared brick piers, carved brackets, and a carved wooden entablature. The leftmost and rightmost bays on the first story each have two 1/1 windows with limestone lug sills. The central second story bay has two transomed entrances leading to the porch roof, which forms a balcony. The balcony has squared half piers capped in limestone and a cast iron balustrade. The leftmost and rightmost bays of the second story each include two 1/1 windows with limestone lug sills. All of the openings on the second story have soldier course headers of green enameled brick matching a course of decorative inlaid patterning in green enameled brick between the second story and the parapet. The windows at the basement level are obscured by thick shrubbery.</p>

Description			
<p>This red brick building stand two stories tall and two bays wide. It has a flat roof behind a side gabled false roof with overhanging eaves, large carved brackets, and exposed rafter tails. A raised flat-roofed porch occupies the first story left bay. It has squared brick piers, a solid brick bulkhead capped in limestone, and a wooden pediment with modillions and large carved brackets. The porch serves the first-story flat and shelters a transomed door framed by two windows which retain their original wooden sashes. The right first story bay has a recessed entrance porch with two transomed doors and a soldier course header. The second story left bay has a transomed door framed by two windows which retain their original wooden sashes; the wooden door with stylized vision panels is original as well, and leads to the first-story porch roof which forms a balcony. The right second story bay has a single square-headed window with a limestone lug sill.</p>

<p>Description</p> <p>This brown brick building stands two stories tall and two bays wide on a raised basement. It has a flat roof with a shaped front parapet with raised end blocks capped in terra cotta. The parapet features a large applied triangular pediment faced in what appears to be metal siding and once supported by two large brackets, of which only one remains. The first story left bay has a raised porch over two transomed entrances and includes a solid brick bulkhead capped in limestone, squared brick piers with squared limestone capitals and a simple wooden entablature. The porch roof is flat and forms a balcony accessed by a single transomed entrance in the second story left bay. The first and second story right bays each have two windows with limestone lug sills and modern cloth awnings; the windows of the first floor right bay share a brick label mold. At the basement level of the right bay are two glass block windows.</p>

<p>Description</p> <p>This red brick building stands two stories tall and two bays wide on a raised basement. It has a flat roof with a shaped front parapet with raised end blocks capped in terra cotta. The parapet includes an applied triangular pediment, which is fully open - exposing the brick wall behind it. The pediment is decorated with dentils along the bottom edge of each side and is supported by large carved brackets at either end and at the peak; it sits above a second story header lentil course. The first story left bay has a raised porch with a solid brick bulkhead capped in limestone, squared brick piers capped in squared limestone capitals, and a simple wooden entablature; it also features a flat roof which forms a balcony enclosed by a metal balustrade and accessed by a set of transomed french doors in the second story left bay. The first and second story right bays each have two 3/1 windows with limestone lug sills; the windows of the first story right bay also have soldier course lintels and a shared label mold. Below the sill line of the first story, the building is faced in light brown brick. At the basement level of the right bay are two small window openings.</p>

<p>Description</p> <p>This flat-roofed brick building stands two stories tall and two bays wide. The facade is brown brick. At the right bay, the hipped brick porch is a later addition featuring mid century variegated brick. The two right bay front doors are difficult to see behind heavy storm doors; both retain transoms. At the left bay, the basement window and first story window have vertical brick lintels (1 1/2 soldier bricks tall). The left bay first and second story windows and the right bay second story window have stone lug sills (painted) and have metal awnings. There is a double course of raised brick defining the first story sill level. Over the second story windows is another course of raised brick below a simple corbeled brick cornice and low parapet with a slightly raised center step and terra cotta coping. While the roof appears to be flat from the street, there are gutters rather than parapets at the side elevations.</p>

Description	<p>This is one of four single-story flat-roofed brick buildings in a row which appear to have been constructed from the same plans. Similarities between the four include a hipped porch at the right bay and two windows with brick label moldings at the left bays. Three of the four (4114-4118 W. Lee) retain a false flared shed roof between stepped brick parapets ascending from the side walls. There is a small hipped dormer in the structure and eaves with modest wood modillions. At this house, the door and door-shaped side panel have been replaced but retain transoms. The two windows at the left bays appear to be replacements (although they are obscured by fabric awnings) and rest on a stone sill course. The brick above the course is red; below the course it is brown. The front porch structure is replaced; full-height brick piers rest on a concrete base and support a molded wooden entablature. At the basement level of the left bay there are two fixed windows.</p>

Description	<p>This is one of four single-story flat-roofed brick buildings in a row which appear to have been constructed from the same plans. Similarities between the four include a hipped porch at the right bay and two 1/1 windows with brick label moldings limestone lug sills at the left bays. Unlike the three to the east, this house has no false roof; instead, the painted brick facade terminates in a front parapet with small end blocks and a small, shallow center step. Two square brick piers with corinthian-style capitals rest on knee walls of the brick porch. The right bay front door is a replacement, obscured by a heavy security storm door; it retains a transom and there is a small narrow window in the wall to the right of the door.</p>

Description This red brick building stands two stories tall and has four facade bays. A hipped brick porch with squared brick piers and a molded wooden entablature is at the center two bays. All four doors have been replaced; the center two doors are covered over with wood or paneling, indicating the conversion from four flats to two townhouse units. All four windows at the second story and both at the first story's outer bays are original wood sash 1/1s. Above a corbeled brick cornice, the front parapet wall has projecting end blocks and a stepped center block, all with terra cotta coping.

<p>Description</p> <p>This single story house has a flared shed false roof between stepped brick parapets ascending from the side walls. The roof structure has a centered small hipped dormer with a paired fixed window and eaves with modest wood modillions. At the right bay, the frame porch base rests on brick piers, with two tapered square columns supporting a wide molded entablature and nearly flat roof. The front door in the right bay is obscured behind a storm door. At the left bay, a single wide 1/1 window rests on a stone sill course. Its raised brick label molding and the quoins at the edges of the facade are red brick; the rest of the facade is light brown brick. At the basement level of the left bay there is a paired window under a segmental arch comprised of rowlock and soldier courses.</p>

<p>Description</p> <p>This brick building stands one story tall and two bays wide on a raised basement. It has a flat roof with a shaped front parapet with raised center and end blocks capped in terra cotta coping. At the right bay, the non-historic frame porch structure supports the original molded and dentilled entablature and hipped roof which shelters a transomed entrance. The front door appears to be original behind a storm door. At the left bay, paired 1/1 replacement windows are fitted into a single wide opening under a brick label mold. The facade features a raised sill course and has quoins at its corners.</p>

Description	<p>This two story brick building has two façade bays and a flat roof. This small brick porch at the right bay shelters two transomed entrances and is non-original although it may date from the period of significance; it has a shed roof, brick corner piers, solid brick bulkhead, and simple wooden entablature. Above the porch at the second story is a segmental arched window opening. Both stories of the left bay have wider segmental arched openings. At the first story the sill is a continuous stone course. Second story sills are painted and set into a billeted brick double course. The segmental arches of the three main window openings are triple courses of rowlock brick; at the middle course, every other brick is set back. Over the second story arches is a molded brick course. The cornice featured soldier brick, projecting metal-capped end blocks, and a painted brick parapet which appears rebuilt. At the basement level of the left bay is a wide window opening with a soldier course segmental arch lintel. All window and door openings have been boarded over.</p>

Contributing?	<input type="text" value="Yes"/>		
Description	<p>This brick four-family walkup building stands two stories and has three façade bays and a flat roof. The building is built very close to its corner lot lines, and inspection indicates that the first floor left and right bays were originally open storefronts. The storefronts are still present on the 1909 Sanborn map, but the sympathetically detailed infill (brick with two stone-stilled segmental arched window openings at each former storefront) indicate a historic-era conversion to residential. The first story's center bay features a wide boarded opening with a stone round arch under a corbelled brick and stone lintel. The six second story window openings are segmental arched with soldier courses. The windows themselves are extremely deteriorated 1/1 sashes, most without glass. There is a stone sill course at the second story and a molded brick course at the lintels. Each pair of windows has a recessed brick panel above it; the parapet is missing, exposing the interior brick of the wall. There is a painted ghost sign at the side elevation for "Geo. Karl pure food grocer and Royal Patent Flour."</p>

Description	<p>This two and one-half story variegated brick building stands two bays wide. It has a large cross gabled front roof comprised of a flared front gable with flared vergeboards in the left bay, and a steeply-pitched jerkinhead side gable extending downwards over the upper two stories of the right bay to form a first-story porch. Both gables retain their original slate shingles. The porch has buttressed brick piers, carved wooden brackets, a solid brick bulkhead capped in limestone, and brick steps. It shelters two entrances which retain their original wood and vision paneled doors. The left side of the entrance porch opens onto an open-air porch with squared brick columns and a cast iron balustrade. Over this, the left bay has two casement windows, each with paired multi-paned sashes, with brick sills and segmental-arched soldier course lintels. The second story left bay has three narrower casement windows with original multi paned sashes and brick sills over a cast iron balconet. Above these, the gable front is stuccoed and has a small multi-paned window with a brick sill beneath its peak. In the right bay, a shingled hipped dormer rises from the side gable at the second story. It has a single window with original 6/6 sashes.</p>

Description			
<p>This narrow two-story flat-roofed building stands three bays wide. The structure dates from the late 19th century, though its current façade dates to the early 20th century. It features variegated brick above rough-cut ashlar limestone beneath the first story sill line. The right first story bay is also faced in limestone and protrudes slightly from the wall plane; it has an asymmetrical, flared front-gabled roof tiled in red terra cotta and contains a single entrance. The remaining first and second story bays each have single windows with original 4/4 sashes, limestone lug sills, and limestone end blocks. A simple patterned brick course runs at the sill line below a low front parapet.</p>

<p>Description</p> <p>This one and one-half story red brick building is side-gabled with a large central wall dormer. A short flight of steps framed by brick knee walls leads to a raised, open entrance porch which extends across the first story. The left first story bay has an entrance with an elliptical fanlight below a rounded, thickly-molded bracketed hood; it retains its original wooden door with vision panels. A small round-arched window with a brick sill and brick lintel and keystone is positioned to its left. The right bay has two sets of French doors below elliptical fanlights with brick lintels and keystones; these lead to the porch, and retain their original multi-paned doors and storm doors. The second story has a central ribbon of three windows with a brick sill and segmental arched soldier course header. A bulls-eye window is below the dormer peak. The sides of the dormer between its roof and the principal roofline have been built out and covered with modern paneling; these may cover brackets of some kind.</p>

Description			
<p>This variegated brick building stands two stories tall and two bays wide. It is front-gabled, with an applied overlapping gable over the left bay; both this and the principal roofline have wide vergeboards, simple brackets, and overhanging eaves. The first story left bay has a raised, flat roofed porch over two entrances; it has wide eaves, a simple wooden entablature, squared brick piers, and a solid brick bulkhead. The first story right bay has a ribbon of three windows with original 2/1 sashes, brick sill and soldier course header with limestone end blocks. The second story right bay has an identical ribbon without the end blocks. The second story left bay has a window with original 3/1 sashes and a brick sill next to an entrance with its original wood and vision panel door; this leads to the porch roof, which forms a balcony with cast iron balustrade.</p>

Description This brown brick house has a jerkinhead roof with wide overhanging eaves and very large carved wooden brackets. A flat-topped porch covers most of the first story, with battered brick piers, a solid brick bulkhead, paneled wooden entablature with brackets, and brick stairs framed by brick knee walls. A transomed entrance occupies the left first story bay, and a paired window with brick sill occupies the right bay. A paneled, square-sided bay is positioned above the roof deck; it has a three-window ribbon. To either side are small square-headed fixed windows with brick sills.

Description			
<p>This one and one-half story red brick building has pale patterned brickwork and is front-gabled with vergeboards and brackets. Both the principal roof and porch roof have red terra cotta tiling. The hipped-roof one-story full-width porch has wide overhanging eaves, paired brackets, a simple wooden entablature, squared brick piers with vertical header course inlays, and a solid brick bulkhead. The left first story bay has a single entrance. The right bay has a tripartite window with brick sill and original 6/1 and 4/1 sashes. A ribbon of three windows sits just above the porch roofline and retains its 6/1 sashes; it has a stepped soldier course lintel, and another soldier course runs to either side just below the lintel line. Brick header courses surround a louvered vent below the roof peak, and two small diamond-shaped windows surrounded by header courses are to either side of the window ribbon.</p>

Description This one and one-half story brick building stands two bays wide. It is side-gabled, with an oversized gabled dormer rising from the center of the roof slope. The roof overhangs the first story to form a wide porch with battered brick piers and a solid brick bulkhead capped in limestone. The left first story bay has a tripartite window with brick sill, and the right bay has an entrance with sidelights below a segmental arch lintel. Both the door and sidelights retain their original wood framing and multi-paned vision panels. On the second story, the large gable is two bays wide with overhanging eaves, brackets and exposed rafter tails. It has two sets of paired windows sheltered by modern awnings.

Description			
<p>This cross-gabled variegated brick building stands two stories tall and three bays wide on a raised basement. A front-facing flared catslide gable comprises the center and right bays, and a medium-pitched side gable contains the left bay. The roof retains its copper flashing. The first story center bay contains an integral entrance porch under a round-arch framed by textured limestone. All windows have soldier course lintels and brick sills. The first story right bay has a tripartite window and the second story right bay has a paired window. There is a single window in the left bay mid-way between the first and second stories, likely positioned to overlook an interior staircase.</p>

Description This variegated brick building stands two stories tall and two bays wide on a raised basement. It has a jerkinhead roof with overhanging eaves and vergeboards. A raised, one-story full-width porch with a solid brick bulkhead is open in the right bay and sheltered by a jerkinhead roof with squared brick piers in the left bay. There are two transomed entrances in the first story left bay, as well as a flight of brick steps framed by brick knee walls leading to the porch. The right first story bay has a ribbon of three 1/1 windows with a molded brick sill. The right second story bay has a paired window with historic 4/1 wooden sashes, a molded brick sill, and a soldier course lintel. The left second story bay has a three-sided cant bay with historic 4/1 wooden windows, a bracketed jerkinhead roof, and contemporary siding. There is a brick and limestone patterned inlay beneath the roof peak.

<p>Description</p> <p>This flat-roofed red brick building stands two stories tall and three bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with raised center and end blocks. All windows have orange brick soldier course headers and limestone sills. The center bay has a ground level entrance with sidelights under a peaked limestone lintel framed by staggered limestone blocks. Above this, a single window with a splayed limestone keystone sits between the first and second stories. In the first and second story left and right bays are ribbons of three historic 4/1 wooden windows with splayed limestone keystones and end blocks. Orange brick headers form a rectangular pattern at the center of the façade above the second story.</p>

Description This flat-roofed red brick building stands two stories tall and three bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with raised center and end blocks; the center block projects outward from the wall plane and is corbeled and decorated with a white enameled brick lozenge design. It has a raised porch over two entrances in the first story center bay with bracketed squared brick corner piers, a solid brick bulkhead capped in limestone, and a bracketed wooden entablature. The porch's roof is flat and enclosed with a metal balustrade, forming a balcony accessed by a single entrance in the second story center bay. The first and second story left and right bays have single windows with brown brick soldier course headers and limestone lug sills.

Description			
<p>This flat-roofed variegated brick building stands two stories tall and five bays wide on a raised basement. It has a shaped front parapet with a stepped, raised center block that projects slightly from the wall plane. It has a wide, overhanging cornice with a hip roof shape and shingling, decorated with modillions. There is a soldier lentil course at the basement, first, and second floors with square limestone keystones and endblocks. The center bay is occupied by a single entrance with wooden surrounds and a bracketed hipped hood. Above the entrance in the center bay is a single window with a brick soldier course header with a square limestone keystone sitting between the first and second stories. The left left and right most bays have single windows at the first and second story; and the bays to either side of the center bay have paired windows at the first and second story. Each bay except the center bay has a single window at the basement level. All windows except the basement windows have limestone lug sills and modern metal awnings.</p>

Description			
<p>This variegated brick building stands two bays wide on a raised basement. It has a front-gabled roof with overhanging eaves framed by a tall exterior chimney with a buttressed base at the right side of the façade. The foundation is faced in random ashlar limestone. The left bay projects slightly from the wall plane; it has a battered base and is capped by a steeply-pitched applied gable which peaks above the principal roofline. Beneath is a raised, round-arched recessed entrance framed in rough-cut limestone. The right bay has a ribbon of three 1/1 windows with a rough-cut limestone lintel with keystone and end blocks, a brick sill, and diamond lights in the upper sashes. Both the principal roof and entrance gable have vergeboards. A tall, narrow fixed window with a limestone block lintel with keystone and brick sill sits below the roof peak.</p>

<p>Description</p> <p>This frame front-gabled building stands one and one-half stories tall on a raised basement. The exterior is sheathed in metal siding. A raised full-width, one-story porch with a metal awning, metal supports, a metal balustrade, and a concrete base faced in imitation stone veneer shelters an entrance in the first story left bay and a paired window in the right bay. A historic wood 1/1 window sits at the center of the second story.</p>

<p>Description</p> <p>This one and one-half story variegated brick building stands two bays wide on a high raised basement. It has a front-gabled roof with wide overhanging eaves and historic wooden vergeboards. There is a raised, front-gabled full-width porch with thick raked molding, a molded wooden entablature, timbering, buttressed brick corner piers, and a solid brick bulkhead. An entrance is in the right bay and the left bay has a tripartite window with a brick sill and historic 3/1 and 2/1 wooden sashes. A rectangular three-paned, fixed window with a brick sill sits below the roof peak.</p>

Description This flat-roofed, one-story brown brick building stands three bays wide on a raised basement. It has a flat front parapet decorated with enameled brick inlay patterns over a corbelled brick cornice. A raised brick porch capped in limestone and framed by brick knee walls capped in limestone lead to a recessed entrance in the right bay. Historic 1/1 wooden windows are in the center and left bays. A limestone course runs above the brick foundation, which contains historic 2/2 wooden windows in the center and left bays. The first story windows have contemporary decorative battened shutters, and all first story bays have modern metal awnings.

Description			
<p>This variegated brick building stands two stories tall and three bays wide with a front-gabled roof with vergeboards. An open full-width porch is faced is random ashlar limestone and has a cast iron balustrade. Entrances are in the left and right first story bays, accessed by separate flights of concrete stairs. The left first story bay projects from the wall plane and features a steeply-pitched asymmetrical gable with shaped vergeboards and textured limestone blocks framing the doorway. The right first story bay is flush with the wall plane and has a shed-roofed hood with heavy carved wooden brackets. The center bay has a ribbon of three 1/1 windows with a brick sill. The second story center bay has a ribbon of three 1/1 windows with a brick sill as well, though with an orange soldier course header. Orange brick patterned inlays occupy the left and right second story bays, and a brick and limestone pattern frames a brick vent beneath the roof peak.</p>

Description	<p>This variegated brick building stands two stories tall and three bays wide. It is flat-roofed, with a shed false roof between shaped side parapets (this is covered in asphalt siding, and may have originally featured the flared eaves and brackets found on 4196-98 Sacramento). A raised flat-roofed porch occupies the wide first story center bay over two entrances (two original entrances and all original transoms have been sealed and covered in wood paneling – would have had four transomed entrances as found in 4188-90 through 4196-98 Sacramento); it has squared brick piers with carved wooden brackets, a solid balustrade capped in limestone, wooden entablature, and overhanging eaves. The second story center bay has two high fixed windows with a shared limestone lug sill between two original wood and vision paneled doors leading to the porch roof, which forms a balcony with squared brick piers capped in limestone framing a cast iron balustrade. The left and right first and second story bays each have single 1/1 windows with limestone lug sills.</p>

Description	<p>This variegated brick building stands two stories tall and three bays wide. It is flat-roofed, with a shed false roof with overhanging eaves between shaped side parapets (this is covered in corrugated metal sheets, and may have originally featured the flared eaves and brackets found on 4196-98 Sacramento). A raised flat-roofed porch occupies the wide first story center bay over four transomed entrances; it has squared brick piers with carved wooden brackets, a solid brick bulkhead capped in limestone, wooden entablature, and overhanging eaves. The second story center bay has two high fixed windows with a shared limestone lug sill between two doors leading to the porch roof, which doubles as a balcony with squared brick piers capped in limestone framing a cast iron balustrade. The left and right first and second story bays each have single 2/1 windows with limestone lug sills.</p>

Description	<p>This variegated brick building stands two stories tall and three bays wide. It is flat-roofed with a flat front parapet (this likely replaced a shed false roof with flared overhanging eaves as seen at 4196-98 Sacramento). A raised flat-roofed porch occupies the wide first story center bay over four transomed entrances; it has squared brick piers with carved wooden brackets, a wooden entablature, a solid brick bulkhead capped in limestone, and overhanging eaves. The second story center bay has two high fixed windows with a shared limestone lug sill between two original wood and vision paneled transomed doors leading to the porch roof, which doubles as a balcony with squared brick piers capped in limestone framing a cast iron balustrade. The left and right first and second story bays each have single windows with limestone lug sills and original 4/1 sashes.</p>

<p>Description</p> <p>This variegated brick building stands two stories tall and three bays wide. It is flat-roofed, with a bracketed shed false roof with flared overhanging eaves tiled in red terra cotta between shaped side parapets. There is a molded wooden entablature running between the roof brackets. A raised flat-roofed porch occupies the wide first story center bay over four transomed entrances; it has squared brick piers, a solid bulkhead capped in limestone, wooden entablature, and overhanging eaves. The second story center bay has two high fixed windows with a shared limestone lug sill between two doors leading to the porch roof, which forms a balcony with squared brick piers capped in limestone framing a cast iron balustrade. The left and right first and second story bays each have single windows with limestone lug sills and original 4/1 sashes.</p>

A raised flat-roofed porch with overhanging eaves occupies the center two bays over four transomed entrances, the center two of which retain their original three-paned transoms and wood and vision paneled doors. The porch has squared brick corner piers, a solid brick bulkhead, a wooden entablature, and two stairways framed by brick knee walls. The second story center bays have two high fixed windows with shaped brick sills, framed by two doors leading to the porch roof, which forms a balcony with a cast iron balustrade. The left and right first and second story bays each have paired 1/1 windows with shaped brick sills and soldier course lintels.</p>

<p>Description</p> <p>This one story variegated brick building stands two bays wide. It has a front-gabled roof with overhanging eaves and vergeboards. A raised, front-gabled porch occupies the first story right bay over a transomed entrance; it has solid brick corner piers and is partially enclosed by a solid brick bulkhead. The gabled porch connects to an open-air porch with a solid brick bulkhead in the left bay. The left bay has a tripartite window with original 9/1 and 6/1 sashes and a soldier course lintel. A small square fixed window with a brick sill sits below the roof peak.</p>

<p>Description</p> <p>This blonde brick building stands three bays wide on a raised basement. It has a front-gabled roof with overhanging eaves and an asymmetrical façade. An entrance occupies the center bay flanked by paired windows in the left and right bays; these openings are placed slightly to the right of center, and the left part of the façade is punctuated by raised, staggered headers. The area between the windows and entrance and the roof peak is faced in siding. A thin limestone course descends from the roofline and runs beneath the windows to frame the fenestration.</p>

Description	<p>This flat-roofed variegated brick building stands two stories tall and three bays wide on a raised basement. It has a shaped front parapet capped in terracotta with a raised, peaked center block and raised end blocks. There is a first story limestone sill course. The first story center bay has a raised, hipped-roof porch over four transomed entrances. The porch has squared brick piers, a terracotta tiled roof, copper gutters, a solid brick bulkhead capped in limestone, two flights of stairs, and a wooden entablature. The first story left and right bays have 4/1 windows with soldier course lintels. There are single windows with soldier course lintels in the second story left and right bays. The center second story bay has two small rectangular art glass windows which share a limestone sill course. Brick soldier and stretcher courses are arranged in patterns across the upper part of the second story, some of which run at the lintel line.</p>

Description	<p>This variegated brick building stands one and one-half stories tall and two bays wide on a raised basement. It has a front-gabled roof with overhanging eaves and vergeboards. A tall external, decorative stepped chimney is positioned to the right side of the façade, and there is a raised and open full-width concrete porch with a metal balustrade. A bracketed, peaked hood with vergeboards shelters the left bay. Below is a round-arched entrance flanked by high round-arched windows (now filled with stucco), all framed by brick header and soldier courses. A ribbon of three windows with a brick sill occupies the right bay framed by brick soldier courses. A round-arched window (now paneled-over) framed by brick headers sits below the roof peak.</p>

Description	<p>This red brick, L-shaped building stands four bays wide and one story tall on a high raised basement. It is flat-roofed, with a flared shed false roof framed by side parapets. The building's long, street-facing wing contains the left two bays and its shallow rear wing contains the right two bays. A large wooden porch with a flat roof appears to have replaced an earlier structure, and is attached to the right side of the long wing and the front of the rear wing. The left bays contain 1/1 windows with segmental-arched soldier headers and limestone lug sills under a running shaped brick label mold. The innermost right bay contains a transomed entrance leading to the porch, and the right bay has a window with limestone lug sill. Large 1/1 windows with segmental-arched lintels occupy each bay at the ground level.</p>

<p>Description</p> <p>This variegated brick building is two stories tall and two bays wide. It is front-gabled with vergeboards and brackets. The first story right bay has a raised, flat-roofed porch over two entrances. It has battered random ashlar limestone piers, a solid brick bulkhead, a flight of brick stairs, and a thick brick entablature. The second story right bay has a pointed-arch door with simple traceried panes and a small blind pointed-arch window; the door leads to the porch roof, which forms a balcony with low brick piers framing a cast iron balustrade. The first and second story left bays each have a transomed ribbon of three windows with their original multi-paned sashes and brick sills, all under Tudor arches lined with staggered rough cut limestone blocks. A random ashlar limestone buttress steps outwards from the principal wall plane in the left first story bay.</p>

<p>This variegated brick building stands one and one-half stories tall and two bays wide with a front-gabled roof with vergeboards. Its foundation and stepped portions of the main façade are faced in random ashlar limestone. The first story right bay projects slightly from the wall plane; it features a tall chimney rising above the roofline next to a steeply-pitched applied gable with wide vergeboards. Beneath the gable is a raised, round-arched entrance framed by limestone blocks under a wide corbelled brick rowlock arch, accessed by an open limestone porch. The left first story bay has a wide fixed window with a brick sill and soldier course lintel with a square limestone keystone and end blocks. A narrow second story 1/1 window with a brick sill and soldier course lintel with a limestone keystone sits below the roof peak.</p>

<p>Description</p> <p>This variegated brick building stands two stories tall and two bays wide. A raised, full-width porch is open in the first story left bay and has a flat-roof over two transomed entrances in the the first story right bay. The porch roof has a molded wooden entablature with modillions, squared piers, and a solid bulkhead. These, along with stepped portions of the first story façade, are faced in rough-cut ashlar limestone. The first and second story left bays have tripartite windows with 1/1 sashes, brick sills and soldier course lintels. The second story right bay has a door with sidelights and a modern metal awning leading to the porch roof, which forms a balcony with a cast iron balustrade. A small, four-paned bulls-eye window surrounded by brick headers sits below the roof peak.</p>

Description	<p>This variegated brick building stands two stories tall and two bays wide. It has a bracketed front-gabled roof with vergeboards. The first story left bay has a raised, flat-roofed porch with wide overhanging eaves, squared brick piers, and a flight of brick stairs; it shelters two round arched entrances, and opens onto an open-air porch with a solid brick bulkhead in the right bay. The second story left bay has an original round-arched wood and vision paneled door under a bracketed front-gabled hood. This leads to the porch roof, which forms a balcony with squared brick columns framing a cast iron balustrade. A small window with a soldier course lintel and limestone keystone stands to the door's left. The right first and second story bays each have paired windows with brick sills and soldier course lintels with limestone keystones. A bulls-eye window framed by brick headers sits below the roof.</p>

Description	<p>This two story variegated brick building stands three bays wide. It has a shallow hipped roof with overhanging eaves. The left first story bay contains a single entrance with a patterned brick enframent under a corbelled and scalloped entablature. The center and right first story bays have narrow pairs of original French doors under soldier course lintels. A header course runs at the second story sill line and a soldier course runs beneath the second story lintel line. Each second story bay contains a single 1/1 window; at least the right bay retains its original paired casement windows. A cast iron balconet rests on the entrance enframent entablature below the left second story window.</p>

Description			
<p>This variegated brick building stands two stories tall and two bays wide. It is flat-roofed, with a side gabled false roof with overhanging eaves. All main façade roof surfaces are tiled in green terra cotta, and the first story is faced in random ashlar limestone masonry below the sill line. A raised, front-gabled porch occupies the left first story bay over two transomed entrances with original wood and vision paneled doors. It has wide overhanging eaves, dramatically-shaped vergeboards, brackets, and an arched wooden entablature. The porch's squared, buttressed piers and solid balustrade are faced in random ashlar limestone. A smooth limestone course runs at the first story sill line below a tripartite window with soldier course header in the first story right bay. The second story right bay has a tripartite window with original 6/6 and 4/4 sashes and limestone lug sill. The second story left bay has an oriel window with a hipped roof rising above the principal roof line.</p>

Description	<p>This two-story flat-roofed brick building has a limestone foundation of coursed rubble. There is a false side gabled roof clad in green terracotta tiles that runs between the front wall and the chimney at the side elevation; on the side elevation under the gable end is a tall round-arch opening filled with yellow brick laid in a woven diaper pattern. The front elevation has an entrance bay at left in which there is a stone-piered gabled front porch with stone steps. The roof is clad in green terracotta tile. Behind the porch is a jack-arch entrance with replacement and metal security doors. At the second floor is a heavy stone sill with consoles beneath a jack-arch opening with rusticated voussoirs; inside are paired hinged wooden sash. The second floor here rises to form an intersecting gable, which has terra cotta coping and end steps. The face of this section has a raised diaper pattern. In the right bay is a tripartite window in the first floor opening, which has rusticated voussoirs and a keystone. The windows consist of a central wooden 6/6 window flanked by 4/4 windows. A stone sill course runs above the first floor, with consoles spaced at intervals. Above this the wall is clad in yellow brick. Two jack arch openings contain wooden double-hung 8/8 windows.</p>

Description			
<p>This one and one-half story variegated brick building stands four bays wide, and is side-gabled with two large, steeply-pitched cross gables with vergeboards dominating the main façade. The left gable projects slightly forward from the right one, with a wide external chimney rising above the roofline just left of the center of the façade. The chimney has a battered base and randomly-placed limestone block inlays. Each cross-gable is two bays wide; the center two bays have round-arched entrances framed by limestone blocks, with brick rowlock-arched lintels with limestone keystones and original wood and vision paneled doors. A raised, open brick porch with a low solid bulkhead and brick steps framed by brick knee walls extends across these center bays. The left and right outer bays have paired windows (the right of which retains its original 3/1 sashes) with limestone lug sills and patterned brick lintels. The foundation at the corners are faced in roughcut random ashlar limestone. Beneath each cross gable's roof peak is a single round-arched window framed by brick headers with a bracketed limestone sill.</p>

Description			
<p>This variegated brick building stands two stories tall and three bays wide on a raised basement. It has a front -gabled roof with overhanging eaves and vergeboards. All windows have limestone sills. A raised one-story, full -width porch shelters a tripartite window with historic 2/1 and 4/1 wooden sashes in the center bay, framed by entrances in the left and right bay. The porch has a bracketed flat roof with a thick-paneled shaped entablature, squared brick corner piers that extend into a battered base, a solid brick bulkhead capped in limestone, and a flight of brick steps framed by brick knee walls capped in limestone. The porch roof forms a balcony with a metal balustrade framed by squared brick columns capped in limestone. It is accessed by an historic wood- and vision-paneled door in the center bay under a bracketed, front-gabled hood tiled in green terra cotta. To either side are closely-spaced 1/1 windows under a soldier course at the lintel line. A small arched louvered vent sits below the roof peak, and limestone lozenge inlays sit to either side of the second story windows.</p>

Description This narrow flat-roofed red brick building stands two stories tall and two bays wide on a raised basement. It has a shaped front parapet capped in terra cotta with raised end blocks and a stepped center block above a bracketed, green terracotta tiled visor roof. A raised hipped roof porch tiled in green terracotta occupies the left first story bay over two entrances; it has squared brick corner piers with brick inlays, a wooden entablature, and a low solid brick bulkhead. All windows have historic 6/1 wooden sashes, soldier course lintels, and limestone sills. There are paired windows in the right first and second story bays, and a single window in the second story left bay.

Description			
<p>This variegated brick building stands two stories tall and two bays wide. It has a bracketed jerkinhead roof (though three of four brackets are missing) with overhanging eaves. A raised, bracketed front-gabled porch occupies the right first story bay over two entrances and connects to an open raised porch in the left bay. Both have solid brick bulkheads, and the sheltered porch has battered brick corner piers extending to ground level, vergeboards, timbering in the gable front, an arched wooden entablature, and brick steps framed by brick knee walls. The first story left bay has a paired window with 6/1 sashes and a brick sill and soldier course header with a limestone keystone and end blocks. On the second story there is a ribbon of three 6/1 windows with a brick sill at the center of the façade, framed on either side by small round-arched windows with brick sills. A header course runs at the second story lintel line.</p>

Description			
<p>This variegated brick building stands two stories tall and three bays wide on a raised basement. It has a bracketed front-gabled roof with deep overhanging eaves and partially-exposed historic wooden vergeboards. All windows have brick sills. It has a raised, one-story porch with a low pitched hipped roof and paired brackets which shelters a ribbon of three historic 3/1 wooden windows in the center bay and historic wood and vision-paneled doors in the left and right bays. The porch has squared brick corner piers with brick inlays, a solid brick bulkhead, and a flight of brick steps framed by brick knee walls. A ribbon of three historic 3/1 wooden windows occupies the center second story bay, flanked by small 1/1 windows in the right and left bays. All second story windows are framed by brick header courses that encircle each one and run at the sill and lintel lines, along with brick lozenge inlays. A paired fixed window sits below the roof peak.</p>

Description			
<p>This two story red and brown brick building stands three bays wide with an asymmetrical façade. It has a bracketed front-gabled roof with overhanging eaves and vergeboards. All windows retain their original 6/1 sashes, and all entrances have original wood and vision paneled doors. Raised round-arched entrances occupy the first story left and right bays. The right entrance has an open brick porch with brick steps framed by brick knee walls. The left entrance has a flat-roofed porch with battered brick corner piers, a solid brick bulkhead, brackets and modillions, a paneled wooden entablature, and brick steps framed by brick knee walls. The center first story bay has a ribbon of three windows with a brick sill and soldier course lintel with limestone inlays. A soldier course runs at the second story sill line. The left second story bay has a door leading to the porch roof, which doubles as a balcony with low brick columns framing a cast iron balustrade. The center second story bay has a paired window with a brick sill. The right second story bay steps out from the wall plane and overhangs the entrance below it; it is front-gabled with brackets and vergeboards, and has a paired window. ETA: This building has recently undergone fire damage and is missing most of the roof, part of the brick wall in the gable end, and any historic wooden features on the second story left bay.</p>

<p>Description</p> <p>This one-story variegated brick building stands three bays wide on a raised basement. It has a medium-pitched front-gabled roof. A raised, full-width porch has a low-pitched front-gabled roof with a wooden entablature, paneling in the gable front, a solid brick bulkhead, and battered brick corner piers extending downwards into a battered brick base. Both the principal and porch roofs have overhanging eaves and vergeboards. A transomed entrance occupies the center bay, flanked by paired historic 3/1 wooden windows with brick sills.</p>

Description	<p>This red brick building stands one story tall and two bays wide on a raised basement. It has a front-gabled roof with brackets, overhanging eaves, and vergeboards. A raised full-width porch is open in the right bay and sheltered in the left bay by a bracketed, hipped-roof porch with squared piers. It has a solid balustrade which, along with the piers, is faced in imitation stone veneer. The left bay has an entrance alongside a high, narrow window, and the right bay has a paired window with 1/1 sashes and a brick sill. There is a rectangular wooden louvered vent below the roof peak.</p>

Description	<p>This front-gabled one and one-half story variegated brick building stands two bays wide on a raised basement. Its foundation and portions of the main façade are faced in random ashlar limestone. The left first story bay has an applied, steeply-pitched overlapping gable and a tall decorated exterior chimney, both of which rise above the principal roofline. Both the principal and applied gables have vergeboards. The gable contains a recessed, round-arched entrance framed by limestone blocks and a brick compound arch; it overlooks an open porch with a metal balustrade framed by limestone columns. The right first story bay has paired 1/1 window framed by limestone blocks with a brick sill and a soldier course lintel. A single window with a brick sill sits below the roof peak. Both the windows and entrance have modern metal awnings.</p>

Description			
<p>This intersecting-gabled variegated brick building stands one and one-half stories tall and two bays wide on a raised basement. Its foundation and portions of the main façade are faced in random ashlar limestone. The right bay has an applied gable and a decorated exterior chimney which rise above the principal roofline; under the gable is an entrance surrounded by staggered limestone blocks, accessed by a raised and open random ashlar limestone porch with a metal balustrade. Both gables have vergeboards. The left first story bay has a ribbon of three contemporary vinyl replacement windows with a brick sill and metal awning. A narrow glass block window sits below the roof peak on the second story.</p>

<p>Description</p> <p>This intersecting-gabled red brick building stands one and one-half stories tall and two bays wide on a raised basement. Its foundation and portions of the main façade are faced in random ashlar limestone. A low front-facing cross gable with vergeboards occupies the right bay next to a tall decorated external chimney placed near the center of the façade. This bay contains a square headed entrance framed by limestone blocks beneath a round inlay arch of limestone voussoirs, accessed by an open limestone porch with a metal balustrade. The left first story bay has a ribbon of three historic 4/4 wooden windows with a brick sill. There is a metal awning over the entrance.</p>

Description This red brick building stands one and one-half stories tall and three bays wide on a raised rough cut ashlar limestone basement. All windows are contemporary vinyl replacements. It has a steeply-pitched side-gabled roof with two narrow gabled dormers faced in siding. An open rough cut ashlar limestone porch with a metal balustrade occupies the center bay, leading to an entrance with a molded wooden surround and segmental pediment. Single windows with brick sills and applied shutters are in the left and right bays.

Description This variegated brick building stands one story tall and two bays wide on a raised basement. It has a low-pitched cross-hipped roof with wide overhanging eaves. The roof extends outwards over the left bay to form a deep porch with metal corner supports and a metal balustrade. It shelters an entrance surrounded by imitation stone veneer and a paired aluminum window. There is another paired aluminum window in the right bay.
