

## Route 66 State Park

### OUTER LOOP TRAIL

Outer Loop Trail travels the outer borders of the park north of Interstate 44 and follows the paths of the former Times Beach streets of Riverside, Lincoln and Blakey. A small portion of the trail near the main parking lot lies on the famous Route 66. The trail initially parallels the I-44 bridges then continues on a flat tree-lined walk that offers serene glimpses of the Meramec River and surrounding bluffs. Several benches are located along the trail for the comfort and convenience of trail users. In the northwest corner of the park, the Burlington Northern Railroad bridge, which crosses the Meramec River, can be seen and the trail parallels the railroad tracks for a distance. A wetland area is located to the left of the trail followed by a wooded area and a small pond. The landscape then becomes more open.

At the wooden trail gate, Outer Loop Trail intersects with Inner Loop Trail. Outer Loop Trail continues straight ahead and eventually to the access gate for a trail connection to Kircher Park and Flat Creek Trail in Eureka. The trail parallels Interstate 44 back to the main parking lot. White connector 1 (.30 mile) and white connector 2 (.20 mile) are available to connect to Inner Loop Trail. There are also spur trails, blazed in green, that connect to the special event area (.20 mile) and picnic area (.20 mile).

**Distance:** 3.2 Miles

**Uses:**

Hiking

Hardened Surface Biking

Equestrian

**Blazes:**

Green

**Class:** Loop

**Surface Type:** Gravel, Natural, Paved/Concrete

**Trail Rating:** Easy

**Estimated Hiking Time:** 1 Hour, 35 Minutes

**Trailhead & GPS Location:**

38.50405, -90.59370

**Elevation profile is not available**

**You may experience:**

- 2) Natural Surface-dirt/mud/gravel, shifting rock, slippery surface, etc.
- 3) Rocks, roots and/or downed vegetation on trail
- 12) Road/highway crossing

- RED
- ORANGE
- YELLOW
- GREEN
- BLUE
- BROWN
- WHITE CONNECTOR
- SHARED TREAD

- NATURAL
- GRAVEL
- PAVED
- WATER
- BOARDWALK

- 1 Slippery conditions and/or downed vegetation
- 2 Natural surface: dirt, mud, gravel, shifting rocks, slippery surface, etc.
- 3 Rocks, roots and/or downed vegetation on trail
- 4 Low-hanging vegetation
- 5 Physically challenging obstacles
- 6 Wood or stone steps
- 7 Steep grades and inclines over 10%
- 8 Bluffs or drop-offs next to trail
- 9 Bridges and/or structural crossings
- 10 Water/stream crossings without bridges
- 11 Occasional water over trail
- 12 Road/Highway crossing
- 13 Emergency response signs
- 14 Narrow passages
- 15 Raised or protruding obstacles
- 16 Electric fence crossings
- 17 Bison/elk
- 18 Rapidly changing weather conditions
- 19 Motorized boat traffic
- 20 Unexpected waves
- 21 Changing water levels
- 22 Surface or submerged objects

### TRAIL BLAZE COLORS & SURFACE TYPES

The maps on this website indicate the blaze colors for each trail. If more than one trail shares tread, that portion of the trail is identified by more than one color. The surface type of a trail is indicated on the maps generated by this website by a pattern overlapping the blaze color of the trail.

### TRAIL TYPE – Loop, Multi-loop, One Way, System or Multi-section

A **loop** trail is one that will return you to the trailhead. **Multi-loop** trails offer two or more separate loops, ex. a trail having a north and south loop. A **one-way** trail takes you from the trailhead to the farthest point on the trail and you will have to retrace your steps to return to the trailhead. If you plan to return to your starting point on a one-way trail, you will have to double the distance to calculate your estimated mileage and/or hiking time.

A **trail system** is a series of interconnected trails that allow you to choose your own route.

A **Multi-section** trail offers two or more separate sections, ex. Katy Trail State Park, and distances are shown both for the entire trail and the sections.

### YOU MAY EXPERIENCE

These conditions are all things you may encounter while on a Missouri state parks trail. Trailhead signs at the start of each trail also indicate which conditions exist on that trail.

### ESTIMATED HIKING TIME

The estimated hiking time was determined by considering the average user's speed and the conditions that might be experienced on a specific trail. Your speed may be slower or faster than the time listed.

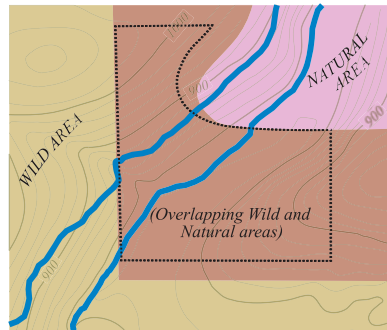

### GPS COORDINATES

There are several methods of communicating GPS coordinates. Most GPS units will convert from one coordinate system to another. If you require a different coordinate system for your unit, visit [dnr.mo.gov/gisutils/](http://dnr.mo.gov/gisutils/) to convert the coordinates shown on this map to another version.

### NATURAL AREAS / WILD AREAS

**Natural areas** are identified in pink. Natural areas are recognized as the best remaining examples known of Missouri's original natural environments. These natural areas are managed and protected for their scientific, educational and historical values. Missouri state parks have 38 designated natural areas, encompassing almost 22,000 acres.

**Wild areas** are identified in brown. The Missouri Wild Area System is made up of large tracts of land set aside as wilderness, which make the perfect setting for hiking and backpacking. A wild area must be 1,000 or more acres in size, show little impact from humans, and possess outstanding opportunities for solitude. They are strictly protected for their wilderness benefits as well as for their use for environmental education and scientific study.

### TRAIL USE

-  Hiking Trail
-  Backpacking Trail
-  Mountain Biking Trail
-  Equestrian Trail
-  Accessible
-  Hardened-Surface Bicycling Trail
-  Paddling Trail
-  Off-Road Vehicle (ORV) Trail
-  Motorized Boating Trail
-  Wagon Suitable Trail
-  Interpretive Trail
-  Fitness Trail
-  Interpretive Water Trail
-  Wildlife Viewing Trail
