Crowder State Park

TALL OAKS TRAIL

The trail traverses a wide variety of the natural communities found throughout the park. It follows the shoreline of Crowder Lake on the north and west, then leads through a mesic bottomland forest composed of sycamore, river birch, cottonwood and black walnut trees. Rising out of the bottoms, the trail traverses a mature woodland dominated by white oak and hickory trees and, at the summit of the ridge, an old field. The South Loop of the Thompson River Trail can be accessed from this trail via the Steep Creek Connector (0.8 mile) or the Northwest Passage Connector (0.8 mile). Additional trail mileage includes the 0.2-mile spur across Crowder Lake dam and the 0.4-mile spur from the campground.

This trail can also be accessed from the shelter 3 and campground amphitheater parking lots.

Trail conditions are monitored and the trail is closed to all uses except hiking when surface conditions warrant. Trail status is available under advisories on the park's web page, by calling 660-359-6473 or by checking the park's Facebook page.

Distance: 2.9 Miles
Uses: Hiking [✓], Mountain Biking [✗]
Blazes: Yellow
Class: Loop
Surface Type: Natural
Trail Rating: Rugged
Estimated Hiking Time: 2 Hours, 53 Minutes
Trailhead & GPS Location: 40.09675, -93.66140

Elevation profile is not available

You may experience:
2) Natural Surface-dirt/mud/gravel, shifting rock, slippery surface, etc.
3) Rocks, roots and/or downed vegetation on trail
7) Steep grades and inclines more than 10%
9) Bridges and/or structural crossings
12) Road/highway crossing
TRAIL BLAZE COLORS & SURFACE TYPES

The maps on this website indicate the blaze colors for each trail. If more than one trail shares tread, that portion of the trail is identified by more than one color. The surface type of a trail is indicated on the maps generated by this website by a pattern overlapping the blaze color of the trail.

TRAIL TYPE – Loop, Multi-loop, One Way, System or Multi-section

A loop trail is one that will return you to the trailhead. Multi-loop trails offer two or more separate loops, ex. a trail having a north and south loop. A one-way trail takes you from the trailhead to the farthest point on the trail and you will have to retrace your steps to return to the trailhead. If you plan to return to your starting point on a one-way trail, you will have to double the distance to calculate your estimated mileage and/or hiking time.

A trail system is a series of interconnected trails that allow you to choose your own route. A Multi-section trail offers two or more separate sections, ex. Katy Trail State Park, and distances are shown both for the entire trail and the sections.

YOU MAY EXPERIENCE

These conditions are all things you may encounter while on a Missouri state parks trail. Trailhead signs at the start of each trail also indicate which conditions exist on that trail.

ESTIMATED HIKING TIME

The estimated hiking time was determined by considering the average user’s speed and the conditions that might be experienced on a specific trail. Your speed may be slower or faster than the time listed.

GPS COORDINATES

There are several methods of communicating GPS coordinates. Most GPS units will convert from one coordinate system to another. If you require a different coordinate system for your unit, visit dnr.mo.gov/gisutils/ to convert the coordinates shown on this map to another version.

NATURAL AREAS / WILD AREAS

Natural areas are identified in pink. Natural areas are recognized as the best remaining examples known of Missouri’s original natural environments. These natural areas are managed and protected for their scientific, educational and historical values. Missouri state parks have 38 designated natural areas, encompassing almost 22,000 acres.

Wild areas are identified in brown. The Missouri Wild Area System is made up of large tracts of land set aside as wilderness, which make the perfect setting for hiking and backpacking. A wild area must be 1,000 or more acres in size, show little impact from humans, and possess outstanding opportunities for solitude. They are strictly protected for their wilderness benefits as well as for their use for environmental education and scientific study.
