WILDFLOWERS OF BENNETT SPRING STATE PARK

The Missouri Ozarks offer a rich diversity of flowering plants, from trees, vines and shrubs to grasses and herbaceous plants. Streamside habitats, rich bottomlands, dry cherty slopes and forest uplands provide the variety of soils and moistures to provide a mosaic of landscapes. This listing contains the 400 species of flowering plants currently known in the park. Some species are grouped generally under a single heading to simplify and shorten this list.

How to use this guide:

The wildflowers in this list are grouped by the predominant color of their bloom. Because names of wildflowers can vary from place to place, their scientific name is included for more definite identification. In the event that there are several species within the genus of a hard to identify group of wildflowers, only the genus is listed with "spp." and the number of species that may be found is in parentheses. For further identification of these genera, you may wish to consult Steyermark's *Flora of Missouri*. The flowers in this list are also grouped in order of the first month in which they usually bloom and listed in order of where they are in the current *Missouri Wildflowers* book (Missouri Department of Conservation, revised and expanded edition 1998). If they are listed in this book, the page number is included after the blooming month(s). If they are not listed in that book, there will be no page number.
